

CARE AND MAINTENANCE

MAINTENANCE TASKS

Certain areas of your dishwasher require occasional maintenance. The maintenance tasks are easy to do and will ensure continued superior performance from your dishwasher.

• Wiping up Spills and Splash-outs

Water may occasionally splash out of your dishwasher, especially if you interrupt a cycle or open the dishwasher door during a cycle. To avoid floor damage and possible mold growth, do not allow wet areas to remain around or under the dishwasher.

• Clean the Stainless Steel Inner Door and Tub

Clean the outer edges of the inside door panel regularly to remove debris that might collect from normal loading. If spots begin to appear on the stainless steel tub or inner door, make sure the rinse agent reservoir is full.

• Clean the drain air gap

Clean the drain air gap periodically to ensure proper drainage of your dishwasher. With most types you lift off the chrome cover. Unscrew the plastic cap. Then check for any soil buildup. Clean if necessary.

• Check and clean the Spray arm nozzles

Occasionally check the spray arms to ensure that the spray arm nozzles (holes) are unobstructed. You must remove the spray arms to check them for obstruction.

• Check spray arm for grease and lime scale deposits.

If you find such deposits:

- Fill detergent dispenser with detergent.
- Start the appliance without utensils in the program with the highest rinsing temperature.
- Clean the appliance with detergents/appliance cleaners which are particularly suitable for use with dishwashers.
- Regularly clean door seal with a damp cloth.

Never use a steam cleaner to clean your dishwasher. The manufacturer is not liable for any consequential damage.

CAUTION

To avoid injury, do not reach into the large object trap with your fingers. The large object trap could contain sharp objects.

Filters

The filters keep large foreign objects in the rinsing water away from the pump. These foreign objects may occasionally block the filters.

The filter system consists of a coarse filter, a flat fine filter and a micro-filter.

After each washing cycle check the filters for residue.

- Unscrew filter cylinder as illustrated and take out filter system.

- Remove any residue and clean filters under running water.
- Re-install filter system in reverse sequence and ensure that the arrow marks are opposite each other after closing the filter system.
