

TLX 6501 programmable room thermostat

INTRODUCTION

This thermostat can replace most common residential thermostats. It is designed to be used with electric, gas, or oil heating or cooling control systems.

Unlike most common single unit design thermostats, the T105 is a new type of thermostat, separating the thermostat function into two units. The receiver makes the hard wired connection to the pump, boiler, motorised valve etc, whilst the control centre (thermostat) can be situated in the living area to read and control the temperature and transmit the information of the receiver via RF.

FEATURES

Several useful functions and operating modes have been incorporated to adapt to a variety of customer needs, besides all the features associated with a state of the art programmable room thermostat.

Differential Selection

Differential is the difference in °C between the unit switching "OFF" and back "ON" again. For example, if temperature is set to 20°C and the differential to 1°C, the heater will operate when the room temperature drops to 19.5°C and turns off when the temperature reaches 20.5°C.

Set DIP switches No1 and 2 as follows to achieve the desired diff.

DIP Switch		DIFF °C
1	2	
ON	ON	1
OFF	ON	2
ON	OFF	3
OFF	OFF	4

Battery Installation

The thermostat is powered by two "AA" alkaline batteries. Ensure correct polarity when installing batteries.

Install 2 "AA" size batteries into the compartment in the front housing. After installing the batteries, refit the back housing ensuring hinge is aligned. Push front cover home till the internal lock engages. Refit control centre stand.

When power is applied for the first time the display must show Time, Day, and Room temperature as shown in example opposite.

If the display is different, press the Reset button using a small probe such as a straightened paper clip.
