

# The Different Types of **MANUAL TRANSMISSIONS**

## **TYPE #1: NONSYNCHRONOUS MANUAL TRANSMISSION**

Nonsynchronous manual transmissions are the first kind that everyone should know about. Synchronizers are a relatively newer transmission improvement, so you will likely find nonsynchronous systems in cars and semitrucks manufactured before the 1960s. If you're repairing or restoring classic cars from before this era, you will likely encounter a nonsynchronous system.

## **TYPE #2: SYNCHRONIZED MANUAL TRANSMISSION**

Synchronized manual transmissions, also known as constant-mesh transmissions, have a synchronizer that manages the speed differential between the input and output shafts. This tool allows the collar and gear to align their speeds before gear tooth engagement. By equalizing the incoming and outgoing rotational speeds, the synchronizer reduces the risk of gear mismatching and slippage. The occurrence of either of these errors could result in gear tooth damage and eventual transmission repair.

## **TYPE #3: SEQUENTIAL MANUAL TRANSMISSION**

Sequential manual transmissions are a kind of nonsynchronous manual transmission. You'll most likely encounter these transmission systems in motorcycle and racing cars as default transmissions and in other vehicles as upgrades. For those who work on hot rod reconstructions, you could find yourself facing one of these systems if you have a racing-class car.
