Computer Algebra and Geometric Algebra with Applications Hongbo Li, Peter J. Olver, Gerald Sommer, 2005-06-20 Mathematics. Mechanization consists of theory, software, and application of computerized mathematical activities such as computing, reasoning, and discovering. Its unique feature can be succinctly described as AAA: Algebraization, Algorithmization, Application. The name Mathematics Mechanization has its origin in the work of Hao Wang. 1960s one of the pioneers in using computers to do research in mathematics particularly in automated theorem proving. Since the 1970s this research direction has been actively pursued and extensively developed by Prof. Wen-tsun Wu and his followers. It differs from the closely related disciplines like Computer Mathematics, Symbolic Computation, and Automated Reasoning in that its goal is to make algorithmic studies and applications of mathematics the major trend of mathematics development in the information age. The International Workshop on Mathematics Mechanization (IWMM) was initiated by Prof. Wu in 1992 and has ever since been held by the Key Laboratory of Mathematics Mechanization (KLMM) of the Chinese Academy of Sciences. There have been seven workshops of the series up to now. At each workshop several experts are invited to deliver plenary lectures on cutting edge methods and algorithms of the selected theme. The workshop is also a forum for people working on related subjects to meet, collaborate, and exchange ideas.

A Guide Book to Mathematics BRONSHTEIN, 2012-12-06 TO THE FIRST RUSSIAN EDITION It was a very difficult task to write a guide book of a small size designed to contain the fundamental knowledge of mathematics which is most necessary to engineers and students of higher technical schools In our tendency to the compactness and brevity of the exposition we attempted however to produce a guide book which would be easy to understand convenient to use and as accurate as possible as much as it is required in engineering It should be pointed out that this book is neither a handbook nor a compendium but a guide book Therefore it is not written as systematically as a handbook should be written Hence the reader should not be surprised to find for example L'Hôpital's rule in the section devoted to computation of limits which is a part of the chapter Introduction to the analysis placed before the concept of the derivative or information about the Gamma function in the chapter Algebra just after the concept of the factorial There are many such imperfections in the book Thus a reader who wants to acquire certain information is advised to use not only the table of contents but also the alphabetical index inserted at the end of the book If a problem mentioned in the text is explained in detail in another place of the book then the corresponding page is indicated in a footnote
