Science John L. Rudolph, 2019-06-01 A former Wisconsin high school science teacher makes the case that how and why we
teach science matters especially now that its legitimacy is under attack Why teach science The answer to that question will
determine how it is taught Yet despite the enduring belief in this country that science should be taught there has been no
enduring consensus about how or why This is especially true when it comes to teaching scientific process Nearly all of the
basic knowledge we have about the world is rock solid The science we teach in high schools in particular laws of motion the
structure of the atom cell division DNA replication the universal speed limit of light is accepted as the way nature works
Everyone also agrees that students and the public more generally should understand the methods used to gain this
knowledge But what exactly is the scientific method Ever since the late 1800s scientists and science educators have grappled
with that question Through the years they've advanced an assortment of strategies ranging from the laboratory method to
the five step method to science as inquiry to no method at all How We Teach Science reveals that each strategy was
influenced by the intellectual cultural and political circumstances of the time In some eras learning about experimentation
and scientific inquiry was seen to contribute to an individual's intellectual and moral improvement while in others it was
viewed as a way to minimize public interference in institutional science John Rudolph shows that how we think about and
teach science will either sustain or thwart future innovation and ultimately determine how science is perceived and received
by the public **Science & Engineering Indicators** ,1989 *Primary Education in Crisis* Brahm Fleisch, 2008 In the past
decade the national preoccupation has been on the crisis in secondary schools Lurking behind the intractable problem of low
pass rates the dysfunctional schools and the small number of higher grade mathematics and science graduates is the
calamity in primary education Drawing on the work of researchers in a range of fields including psychology sociology
anthropology linguistics economics the health sciences and mathematics education this book documents the depth and scope
of the primary education crisis and provides a comprehensive and rigorous explanation of its causes Primary education in
crisis pulls together the wealth of research on health poverty resources language and teaching as factors in academic
achievement in reading writing and mathematics At the centre of the book is an analysis of the published studies that
systematically document what teachers teach and fail to teach and why it is that teaching is at the heart of the crisis in
primary education The author suggests that there are no quick fixes but only hard choices and that for reform to succeed it
