On the Move to Meaningful Internet Systems 2004: CoopIS, DOA, and ODBASE Zahir Tari, 2004-10-11 A special mention for 2004 is in order for the new Doctoral Symposium Workshop where

three young postdoc researchers organized an original setup and formula to bring PhD students together and allow them to submit their research proposals for selection A limited number of the submissions and their approaches were independently evaluated by a panel of senior experts at the conference and presented by the students in front of a wider audience These students also got free access to all other parts of the OTM program and only paid a heavily discounted fee for the Doctoral Symposium itself In fact their attendance was largely sponsored by the other participants If evaluated as successful it is the intention of the General Chairs to expand this model in future editions of the OTM conferences and so draw in an audience of young researchers to the OnTheMove forum All three main conferences and the associated workshops share the distributed aspects of modern computing systems and the resulting application created by the Internet and the so called Semantic Web For DOA 2004 the primary emphasis stayed on the distributed object infrastructure for ODBASE 2004 it was the knowledge bases and methods required for enabling the use of formal semantics and for CoopIS 2004 the main topic was the interaction of such technologies and methods with management issues such as occurs in networked organizations These subject areas naturally overlap and many submissions in fact also treat envisaged mutual impacts among them

Knowledge Grid, The: Toward Cyber-physical Society (2nd Edition) Hai Zhu, 2012-09-11 The Knowledge Grid is an intelligent and sustainable interaction environment that consists of autonomous individuals self organized semantic communities adaptive networking mechanisms evolving semantic link networks keeping meaningful connection between individuals flows for dynamic resource sharing and mechanisms supporting effective resource management and providing appropriate knowledge services for learning innovation teamwork problem solving and decision making This book presents its methodology theory models and applications systematically for the first time Its second edition fulfils the ideal of the Knowledge Grid by including many new contents including 1 The insight of cyber physical society 2 The systematic method of semantic link network that supports uncertainty management discovery of semantic links and semantic communities autonomous semantic data model and cyber physical socio semantic link network 3 Semantic peer to peer infrastructures for efficient knowledge sharing 4 A new
