1. Para realizar proceso de trazar la restitución nos balemos de la marca flotante que mide el paralejo entre el punto homólogo en el que se encuentra sobre las imágenes orientadas para que el software pueda calcular la altura como lo arias con la barra de paralejo pero a tiempo real. Seleccionas le layer que deseas usar y con ayuda del sistema de visión estereoscópico que cuenten en este caso anáglifos desplazas con el mouse la marca flotante (x,y) y sin perder la estereoscopia ajustas la altura del con el scroll del punto que quieras capturar y das clip para marcarlo como punto, vértice de linea o polígono según el layer que estés usando usas doble clip para finalizar una line o polígono.

2. Para poder editar los trazos los seleccionamos con la herramientas siendo la primera para seleccionar uno a ves y el segundo mediante un rectángulo, debemos recordar que para selecciona individualmente no basta con estar en las mismas coordenadas x,y también tenemos que estar en la misma altura z tras seleccionar lo que deseamos editar contámos con diversas herramientas de edición que se muestran en la siguiente imagen.

Erdas Imagine Manual:

Manual of Geospatial Science and Technology John D. Bossler, John R. Jensen, Robert B. McMaster, Chris Rizos, 2001-11-22 Manual of Geospatial Science and Technology shows how to work across the range of geospatial science and technology whether as a user or as a contractor of services employing these technologies and without either specialist education or substantial experience. The manual covers the fundamentals providing the requisite mathematics, computer science and physics necessary to understand how the technologies work assuming some elementary background in calculus and physics. It also shows how the technologies can be used together and focuses on their commonalities. A number of applications such as mapping and environmental modeling are presented and a Web site accompanies the book. [Manual of Geospatial Science and Technology](#) John D. Bossler, James B. Campbell, Robert B. McMaster, Chris Rizos, 2010-03-05

Following in the tradition of its popular predecessor the Manual of Geospatial Science and Technology Second Edition continues to be the authoritative volume that covers all aspects of the field both basic and applied and includes a focus on initiating planning and managing GIS projects. This comprehensive resource which contains contributions from [*A Research Guide to Cartographic Resources*](#) Eva H. Dodsworth, 2018-09-22. The interdisciplinary uses of traditional cartographic resources and modern GIS tools allow for the analysis and discovery of information across a wide spectrum of fields. *A Research Guide to Cartographic Resources* navigates the numerous American and Canadian cartographic resources available in print and online offering researchers, academics, and students with information on how to locate and access the large variety of resources new and old. Dozens of different cartographic materials are highlighted and summarized along with lists of map libraries and geospatial centers and related professional associations. *A Research Guide to Cartographic Resources* consists of 18 chapters, two appendices and a detailed index that includes place names and libraries structured in a manner consistent with most reference guides including cartographic categories such as atlases, dictionaries, gazetteers, handbooks, maps, plans, GIS data and other related material. Almost all of the resources listed in this guide are categorized by geography down to the county level making efficient work of the type of material required to meet the information needs of those interested in researching place specific cartographic related resources. Additionally, this guide will help those interested in not only developing a comprehensive collection in these subject areas but get an understanding of what materials are being collected and housed in specific map libraries, geospatial centers and their related websites. Of particular value are the sections that offer directories of cartographic and GIS libraries as well as comprehensive lists of geospatial datasets down to the county level. This volume combines the traditional and historical collections of cartography with the modern applications of GIS based maps and geospatial datasets. **Digital Libraries: Implementing Strategies and Sharing Experiences** Edward A. Fox, 2005-11-30. This book constitutes the refereed proceedings of the 8th International Conference on Asian Digital Libraries ICADL 2005 held in Bangkok, Thailand in December 2005. The 40 revised full papers, 15 revised short papers and 15 posters

presented together with 5 keynote and invited papers were carefully reviewed and selected from a total of 164 submissions. The papers are organized in topical sections on concepts and models for digital library systems case studies in digital libraries digital archives and museums multimedia digital libraries information processing in asian digital libraries digital libraries for community building information retrieval techniques ontologies and content management in digital libraries information integration and retrieval technologies in digital libraries information mining technologies in digital libraries digital library system architecture and implementations information processing in digital libraries human computer interfaces and metadata issues in digital libraries *ERDAS Imagine ,1982* *Forests and Landscapes* Stephen Richard John Sheppard,Howard W. Harshaw,2001-01-01 Forests are an important component in the visual appeal of landscapes. There is an increasing recognition of the importance of this subject among foresters and environmental scientists. Increasingly forest resource managers must consider the aesthetic consequences of timber harvesting operations and management plans This book is the first to address this subject area It consists of 15 chapters and is divided into four parts It brings together not only foresters and ecologists but also landscape architects psychologists and philosophers It should therefore attract a wide readership Contributors are leading research workers in their subjects from Canada the USA and UK.

and history of glacier monitoring and satellite data analysis It includes a comprehensive set of six how to methodology chapters twenty five chapters detailing regional glacier state and dynamical changes and an in depth summary and interpretation chapter placing the observed glacier changes into a global context of the coupled atmosphere land ocean system An accompanying e supplement will include oversize imagery and other other highly visual renderings of scientific data [Remote Sensing and Urban Analysis](#) Jean-Paul Donnay,Mike J. Barnsley,Paul A. Longley,2003-09-02 One of the key geographical developments over the last two centuries has been that of urbanisation In recent years this has exploded globally particularly in developing countries It is essential for governments planners and researchers in geography and allied fields to understand this process and the main way of being able to do this is to accurately map these changes The main method of this mapping is Remote Sensing This up to date analysis of the area looks at a wide range of methodologies currently being used to produce and analyse remotely sensed data of urban areas The authors examine the various techniques used to extract information from digital multispectral images of urban areas Donnay and Barnsley then go on to look at the identification of urban forms the delineation of agglomerations and the development of urban morphology considering the analysis of integrated data sets and surface models and going on to look at the estimation of human population levels [Digital Libraries](#) ,2005 [Geoecology of Landscape Dynamics](#) Seema Sahdev,R. B. Singh,Manish Kumar,2020-03-03 This book provides an overview of the ecological indicators of landscape dynamics in the context of geographical landscape integration Landscape dynamics depicts every change that occurs in the physical biological and cognitive assets of a landscape To understand and interpret the complex physical biological and cognitive phenomena of landscapes it is necessary to operate conceptually and practically on a broad range of spatial and temporal scales Rapid land use changes have become a concern to environmentalists and planners because of their impacts on the natural ecosystem which further determines socioeconomic dynamics In this regard the book discusses case studies that share new insights into how landscape patterns and processes impact small creatures and how small creatures in turn influence landscape structure and composition In turn the relevant aspects of land use and land cover dynamics are covered and the multi faceted relationship between the substrata and ecological community is highlighted The book is unique in its focus on the application of spatial informatics such as automatic building extraction from high resolution imagery a soil resource inventory for meeting the challenges of land degradation hydrological modeling the temporal variation analysis of glacier area and the identification and mapping of glacial lakes morphometric analysis of river basins and the monitoring and modeling of urban sprawl among other features
