Over the most recent couple of years the importance of undergraduate technical education has grown amid a huge industrial
revolution in our country More refined and recently discovered super specific topics are being introduced instead of old ones
while modifying the course curriculum In the new course curriculum more noteworthy accentuation is laid on the basic
science subjects and on the need to develop in depth knowledge about the fundamentals of any particular area of academic
interest Keeping all this in mind and utilizing my long experience as a teacher in a technical college under a technical
university I have ventured to write this book titled Engineering Chemistry Laboratory Manual In this book all experiments

are explained as per the JNTU syllabus for the first year students of B Tech These are supplemented with theoretical explanations followed by procedure description tabulation calculation sample calculation and finally a series of possible viva voce questions and their answers relating to that experiment This book will certainly help all B Tech B E students to do well in their viva voce while completing their experiments cum examinations It will also serve as a textbook in Chemistry practical examinations for any student in the laboratory I sincerely hope that this book will receive full appreciation from both students and teachers
