Mathematics Autobiography

I consider mathematics as a very important tool in life. My first real memories with mathematics began in my elementary years. I use to bring home assignments of several pages in order to master the basic arithmetic principles. I would go over my textbook answering several pages that included addition, subtraction, multiplication and division. What a truly memorable experiences they were and still was very rewarding especially when I got the correct answers. Other than that, I could compete with my classmates in how fast we can solve the problems.

From my elementary years, mathematics became more demanding when I became a high school student. It was quite a transition period as much as I can recall. Mathematics that was taught to us became more complex and was somehow much more difficult than what I was doing in primary school. High school math was presented as something straight forward. Our teachers during that time presented examples in class and gave the homework without further explanation. I knew I had to work hard and concentrate in order to get decent grades. The problems involved a lot of time and analyzing equations. It was both difficult but fun. When I got the chance to adopt on the new concepts, I easily adjusted and was happy to get decent grades.

For me, Geometry seemed to be the most difficult at that time. It involved a lot of consideration with the principles of Pythagoras. Ever since then, I came to appreciate the importance of its relationship with regards other subject areas and its corresponding practical applications. I felt comfortable when Algebra was the focus of attention in class. I felt that I was able to absorb the lessons quite well and more easily than my class mates. I took this opportunity to help others who had problems with home works and assignments. I must admit that I may not know much more that what my classmates knew, but I had the proficiency to communicate what has to be done and at the same time get the desired results. These experiences made me more adept and a lover of mathematics in theory and practical aspect.

The importance of mathematics can never be undermined. I believe that mathematics is the language of the whole universe. Actually, it is a language of its own. The world will not be complete without mathematics because we would have no buildings, no roads, no electricity, no science, and no sports. A German mathematician by the name of Carl Friedrich Gauss referred to mathematics as "the Queen of the Sciences." All other sciences without mathematics would not be able to function. As such, if one does not have a clear understanding of mathematics, then the other sciences to comprehend and appreciate.

There are no other extracurricular activities that will compare and offer that kind of intellectual stimulation which the field of mathematics offers. Students who indulge with the study of advance mathematics will offer high school students the opportunity to enter and pursue college education. It is in this line that students...

West,2013-03-13 One of my favorite quotes is from a letter of Charles Darwin 1887 I have long discovered that geologists never read each other s works and that the only object in writing a book is proof of earnestness and that you do not form your opinions without undergoing labour of some kind It is not clear if this private opinion of Darwin was one that he held to be absolutely true or was one of those opinions that as with most of us coincides with our bad days but is replaced with a more optimistic view on our good days I hold the sense of the statement to be true in general but not with regard to scientists never reading each other s work Even if that were true however the present essay would still have been written as a proof of earnestness This essay outlines my personal view of how nonlinear mathematics may be of value in formulating models outside the physical sciences This perspective has developed over a number of years during which time I have repeatedly been amazed at how an accepted

model would fail to faithfully characterize the full range of avail able data because of its implicit or explicit dependence on linear concepts This essay is intended to demonstrate how linear ideas have come to dominate and therefore limit a scientist s ability to understand any given class of phenomena **Essays on Mathematical and Philosophical Logic** Jaakko Hintikka,I. Mathematical Recreations & Essays W. W. Rouse Ball,H.S.M. Coxeter,1974-12-15 For over eighty years this delightful classic has provided entertainment through mathematical problems commonly known as recreations Although they often involve fundamental mathematical methods and notions their chief appeal is as games or puzzles rather than the usefulness of their conclusions This new edition upholds the original but the terminology and treatment of problems have been updated and much new material has been added There are new selections on polyominoes and the notion of dragon designs and a new chapter Introduction to Combinatorics Other topics dealt with in the fourteen chapters include arithmetical and geometrical recreations and problems polyhedra chess board recreations unicursal problems cryptography and cryptanalysis and calculating prodigies Since no knowledge of calculus or analytic geometry is necessary to enjoy the recreations this book will appeal widely to teachers of mathematics and students and to anyone who is mathematically inclined **Mathematical Recreations and Essays** Walter William Rouse Ball,Harold Scott Macdonald Coxeter,1987-01-01 This classic work offers scores of stimulating mind expanding games and puzzles arithmetical and geometrical problems chessboard recreations magic squares map coloring problems cryptography and cryptanalysis much more A must to add to your mathematics library The Mathematics Teacher Index References for Further Study Includes 150 black and white line illustrations *Homology Theory* James W. Vick,2012-12-06 The 20 years since the publication of this book have been an era of continuing growth and

development in the field of algebraic topology New generations of young mathematicians have been trained and classical problems have been solved particularly through the application of geometry and knot theory Diverse new resources for introductory coursework have appeared but there is persistent interest in an intuitive treatment of the basic ideas This second edition has been expanded through the addition of a chapter on covering spaces By analysis of the lifting problem it introduces the funda mental group and explores its properties including Van Kampen s Theorem and the relationship with the first homology group It has been inserted after the third chapter since it uses some definitions and results included prior to that point However much of the material is directly accessible from the same background as Chapter 1 so there would be some flexibility in how these topics are integrated into a course The Bibliography has been supplemented by the addition of selected books and historical articles that have appeared since 1973   <u>Mathematical Recreations and Essays</u> Walter William Rouse Ball,1917   **Manual of Chinese Bibliography, Being a List of Works and Essays Relating to China** Paul Georg von Möllendorff,Otto Franz von Möllendorff,1876   *Essays in Librarianship and Bibliography* Richard Garnett,1899   **Essays on Mathematical Reasoning** Jerzy Pogonowski,2021-01-27 This volume contains four essays which may attract the attention of those readers who are interested in mathematical cognition The main issues and questions addressed include How do we achieve understanding of mathematical notions and ideas What benefits can be obtained from mistakes of great mathematicians Which mathematical objects are standard and which are pathological Is it possible characterize the intended models of mathematical theories in a unique way   **Cyclopedia of Classified Dates, with an Exhaustive Index ...** Charles Eugene Little,1899
