Mean Absolute Deviation

CELL PHONES The table shows the number of contacts eight friends have stored in each of their cell phones.

Number of Contacts Stored			
52	48	60	55
59	54	58	62

1. Find the mean of the data.
2. What is the difference between the data value 52 and the mean?
3. Which value is farthest from the mean?
4. Overall, are the data values close to the mean or far away from the mean? Explain.

You have used the interquartile range which describes the variability of a set of data. Another way to describe the variability of a set of data is to use its mean absolute deviation. The **mean absolute deviation** of a set of data is the average distance between each data value and the mean.

Key Concept

Mean Absolute Deviation

The mean absolute deviation of a set of data is the average distance between each data value and the mean.

1. Find the mean.
2. Find the distance between each data value and the mean. That is, find the absolute value of the difference between each data value and the mean.
3. Find the average of those differences.

The mean number of contacts stored and the distance each data value is from the mean is shown below. Each data value is represented by an x .

The average of the distances is $\frac{8 + 4 + 2 + 1 + 2 + 3 + 4 + 6}{8}$, or 3.75.

So, the mean absolute deviation is 3.75. The average distance between each data value and the mean is 3.75 contacts.
