

## Circles: Circumference and Area Lesson Plans

A set of lessons for year 7.

**Lesson 1:** Circumference of the circle and Pi

**Lesson 2:** Area of the circle

**Lesson 3:** Consolidation and Practice

**Lesson 1:** Circumference of the circle and Pi

- Time: 1 hour
- The aim of this lesson is for pupils to learn how to calculate the circumference of a circle.
- You will need: worksheet 1, OHP slide 1, string, metre rules, 30 cm rules, large quantity of circular objects (tins, bottles, etc.), calculators.

**Introduction** (10 mins): Parts of the circle.

Introduce circumference, diameter, radius and area.

Students fill in the blanks on their worksheet.

**Activity** (20 mins)

"In this lesson we will learn how to work out the length of the circumference of any circle".

(Students work in pairs: put one object to measure on each table).

For each object measure, as accurately as possible, the diameter using the 30cm rule and the circumference using string measured against a metre rule. Fill in the table for each object. (Just write down the first 2 numbers after the decimal point in the last column)

Each pair should work out the (mean) average of the values for circumference  $\div$  diameter and fill in the *what do you notice* space.

**Exposition** (15 mins)

Round-up on *what do you notice*. Students averages should all be fairly close to 3.1.

Go through history of  $\pi$ . For most practical purposes we use 3.14.

Scientific calculators often have a  $\pi$  button (demonstrate).

Students fill in blanks on their worksheet.

If we know that circumference  $\div$  diameter =  $\pi$ .

Then Circumference =  $\pi \times$  diameter.

*Example 1:*

The circumference =  $3.14 \times 8 = 25.12$  cm
