**Advances in Human Factors in Architecture, Sustainable Urban Planning and Infrastructure** Jerzy Charytonowicz, Alicja Maciejko, Christianne S. Falcão, 2021-07-03

This book presents human factors research focused on achieving and assessing sustainability in the built environment and architecture. It reports on advanced engineering methods for architecture and design and on assessments of the social environmental and economic impacts of various designs and projects. The book covers a broad range of practical studies relating to ergonomic design and assessment of public and private places urban ecological constructions and urban planning for smart city. Further topics include green area planning environmentally responsive architecture and conservation and adaptation of vernacular architectures in modern design. Based on the AHFE 2021 Conference on Human Factors in Architecture Sustainable Urban Planning and Infrastructure held virtually on 25-29 July 2021 from USA this book offers a wealth of perspectives on sustainability and ergonomics in architecture and urban planning. As such it represents a timely source of inspiration for designers architects urban planners as well as civil and environmental engineers and other professionals including policy makers involved in the development of sustainable buildings and infrastructure

**Procesos y programas de neuropsicología educativa**, 2015 Este interesante libro intenta combinar tanto conocimiento teórico sobre los procesos del aprendizaje como práctico incluyendo los instrumentos para evaluarlo y los programas. Además el libro aborda desde los procesos más básicos como los más complejos y las alteraciones del aprendizaje. Así el lector podrá encontrar capítulos sobre la evaluación de procesos sensoriales como la audición y la visión a capítulos sobre cómo evaluar la memoria la atención la función ejecutiva o la cognición social en el aula. Además también se incluyen capítulos sobre la evaluación de la discalculia o el déficit de atención y/o hiperactividad

**Advances In Underwater Acoustics, Structural Acoustics, And Computational Methodologies (In 4 Volumes)** Sean F Wu, Steffen Marburg, 2025-04-29 This set of volumes encompasses the study of acoustics in diverse environments ranging from underwater and marine environments to structural and civil engineering computational models and aerospace engineering. Each volume comprises peer-reviewed publications in the related field of acoustics from the past decade, arranged such as to review the existing literature, examine new methodologies, and then explore novel applications of pioneering acoustic principles. With contributions by eminent acoustics researchers, this set holds key insights for fellow acoustics researchers and engineers of any field impacted by acoustic phenomena. Volume 1's review chapters summarise theories like geoacoustic inversion as well as criticism of the Biot theory of propagation in fluid-saturated porous solids while the new methodologies shown range from an efficient and stable coupled mode solution to a cell-based smoothed radial point interpolation method. The book concludes with promising applications like experimental evidence of horizontal refraction and bottom attenuation coefficient inversion. Volume 2 reviews topics including radiation boundary conditions for the Helmholtz equation and analytical interpretation of the early literature on the theory of vibrations. The methodologies range from coupled boundary element and energy flow method as well as sound radiation of a line source. The work concludes with promising applications like Lamb Waves in a poroelastic plate and experimental validations of reconstructed excitation forces acting inside a solid enclosure. Volume 3 provides summaries of theories including the benchmark study on eigenfrequencies of fluid-loaded structures and the Burton and Miller method while the new methodologies presented range from a coupled boundary element and energy flow method to an efficient approach to the simulation of acoustic radiation. The volume concludes with promising applications like a comparison of transient infinite elements and transient Kirchhoff integral methods as well as a fast multi-frequency iterative acoustic boundary element method. Volume 4 depicts the context of conventional methodologies including short wave components and Galbrun's equation while its new methodologies range from radiation and outflow boundary conditions for direct computation of acoustic and flow disturbances to the effect of airfoil shape on trailing edge noise. The collection concludes with promising applications like helicopter noise predictions and conservative source interpolation methods for aeroacoustics.
