

② Apply $\vec{F} = q\vec{v} \times \vec{B}$

All of the paths which involve left hand turns are positive particles (path 1); those paths which involve right hand turns are negative particles (path 2 and 4); and those paths which don't turn involve neutral particles.

② (a) $\vec{F} = -e\vec{v} \times \vec{B}$

Greatest magnitude of $\vec{F}$ when angle between $\vec{v}$ & $\vec{B}$ is 90° . $F_{\max} = e v B = (1.60 \times 10^{-19})(7.2 \times 10^6)(83 \times 10^{-3}) = 9.6 \times 10^{-14} \text{ N}$
Least magnitude of $\vec{F}$ when angle between $\vec{v}$ & $\vec{B}$ is 0° . $F_{\min} = 0$

(b) $F = e v B \sin \theta = ma$

$$\Rightarrow \theta = \arcsin\left(\frac{ma}{e v B}\right) = \arcsin\left(\frac{7.2 \times 10^6 \times 49 \times 10^{-4}}{1.6 \times 10^{-19} \times 7.2 \times 10^6 \times 83 \times 10^{-3}}\right) = 28^\circ$$

③ (a) $v = \frac{E}{B} = \frac{1.5 \times 10^8}{0.44} = 3.4 \times 10^8 \text{ m/s}$

(b)  $\vec{B}$ out of page, $\vec{F}$ upward, $\vec{v}$ toward right

④ (a) $F = q v B \sin \theta \Rightarrow v = \frac{F}{q B \sin \theta} = \frac{6.48 \times 10^{-27}}{(1.60 \times 10^{-19})(2.63 \times 10^{-2}) \sin 23^\circ} = 3.94 \times 10^3 \text{ m/s}$

(b) $K = \frac{1}{2} m v^2 = \frac{1}{2} (1.67 \times 10^{-27}) (3.94 \times 10^3)^2 = 1.30 \times 10^{-16} \text{ J}$

$$K = \frac{1.30 \times 10^{-16} \text{ eV}}{1.60 \times 10^{-19}} = 812 \text{ eV}$$

⑤ $F_g = e v B = (1.60 \times 10^{-19})(2.8 \times 10^7)(30 \times 10^{-6}) = 1.34 \times 10^{-16} \text{ N}$

$$F_g = m g = (1.67 \times 10^{-27})(9.8) = 1.64 \times 10^{-26} \text{ N}$$

$$\frac{F_g}{F_g} = 2.2 \times 10^7$$

$$\frac{F_g}{F_g}$$

⑥ $K = \frac{m v^2}{2} \Rightarrow v = \sqrt{2K/m}$, $V = E d \Rightarrow E = \frac{V}{d}$, $K = e V$

$$v = \frac{E}{B} \Rightarrow B = \frac{E}{v} = \frac{V}{d \sqrt{2K/m}} = \frac{1.0 \times 10^5}{(0.02) \sqrt{2(1.50 \times 10^{-16} \times 10^3)} (9.11 \times 10^{-31})}$$

$$B = 2.6 \times 10^4 \text{ T}$$

Numerical Solution of Stochastic Differential Equations Nawaf Bou-Rabee, Eric Vanden-Eijnden, 2019-01-08 This paper introduces time continuous numerical schemes to simulate stochastic differential equations SDEs arising in mathematical finance population dynamics chemical kinetics epidemiology biophysics and polymeric fluids These schemes are obtained by spatially discretizing the Kolmogorov equation associated with the SDE in such a way that the resulting semi discrete equation generates a Markov jump process that can be realized exactly using a Monte Carlo method In this construction the jump size of the approximation can be bounded uniformly in space which often guarantees that the schemes are numerically stable for both finite and long time simulation of SDEs Handbook of Video Databases Borko Furht, Oge

Marques, 2003-09-30 Technology has spurred the growth of huge image and video libraries many growing into the hundreds of terabytes As a result there is a great demand among organizations for the design of databases that can effectively support the storage search retrieval and transmission of video data Engineers and researchers in the field demand a comprehensive reference that will help them design and implement the most complex video database projects *Handbook of Video Databases Design and Applications* presents a thorough overview in 45 chapters from more than 100 renowned experts in the field This book provides the tools to help overcome the problems of storage cataloging and retrieval by exploring content

standardization and other content classification and analysis methods The challenge of these complex problems make this book a must have for video database practitioners in the fields of image and video processing computer vision multimedia systems data mining and many other diverse disciplines Algorithm Design: A Methodological Approach - 150 problems and detailed solutions Patrick Bosc, Marc Guyomard, Laurent Miclet, 2023-01-31 A bestseller in its French edition this book is original in its construction and its success in the French market demonstrates its appeal It is based on three principles 1 An

organization of the chapters by families of algorithms exhaustive search divide and conquer etc On the contrary there is no chapter devoted only to a systematic exposure of say algorithms on strings Some of these will be found in different chapters 2 For each family of algorithms an introduction is given to the mathematical principles and the issues of a rigorous design with one or two pedagogical examples 3 For the most part the book details 150 problems spanning seven families of algorithms For each problem a precise and progressive statement is given More importantly a complete solution is detailed with respect to the design principles that have been presented often some classical errors are pointed out Roughly speaking two thirds of the book is devoted to the detailed rational construction of the solutions **Markov Networks in**

Evolutionary Computation Siddhartha Shaky, Roberto Santana, 2012-04-23 Markov networks and other probabilistic graphical models have recently received an upsurge in attention from Evolutionary computation community particularly in the area of Estimation of distribution algorithms EDAs EDAs have arisen as one of the most successful experiences in the application of machine learning methods in optimization mainly due to their efficiency to solve complex real world optimization problems and their suitability for theoretical analysis This book focuses on the different steps involved in the

conception implementation and application of EDAs that use Markov networks and undirected models in general It can serve as a general introduction to EDAs but covers also an important current void in the study of these algorithms by explaining the specificities and benefits of modeling optimization problems by means of undirected probabilistic models All major developments to date in the progressive introduction of Markov networks based EDAs are reviewed in the book Hot current research trends and future perspectives in the enhancement and applicability of EDAs are also covered The contributions included in the book address topics as relevant as the application of probabilistic based fitness models the use of belief propagation algorithms in EDAs and the application of Markov network based EDAs to real world optimization problems The book should be of interest to researchers and practitioners from areas such as optimization evolutionary computation and machine learning
