**Religious Education in Malawi and Ghana** Yonah Matemba, Richardson Addai-Mununkum, 2021-03-15 Religious Education in Malawi and Ghana contributes to the literature on opportunities and complexities of inclusive approaches to Religious Education RE It analyses how RE in Malawi and Ghana engages with religious pluralisation and provides a compelling case for the need to re evaluate current approaches in the conceptualisation curriculum design and delivery of RE in schools in Malawi and Ghana The book explains how a pervasive tradition of selection involving exclusion and inclusion of religion in RE leads to misrepresentation and in turn to misclusion of non normative religions where religion is included but marginalized and misrepresented The book contributes to wider discourse of RE on opportunities as well as complexities of post confessional approaches including the need for RE to avoid perpetuating the continued legitimisation of selected religions and in the process the delegitimization of the religious other as a consequence of misrepresentation and misclusion Inspired by Braten s methodology for comparative studies in RE the book draws on two qualitative studies from Malawi and Ghana to highlight the pervasive problems of religious misclusion in RE This book will be of great interest for academics scholars and post graduate students in the fields of RE African education educational policy international education and comparative education

### *Toxicology and Risk Assessment* Helmut

Greim, Robert Snyder, 2018-08-10 Provides a complete understanding of how our bodies respond to toxicants and the principles used to assess the health risks of specific exposure scenarios *Toxicology and Risk Assessment A Comprehensive Introduction* Second Edition reflects recent advances in science and technology and provides the scientific background and methodological issues to enable the reader to understand the basic principles in toxicology and to evaluate the health risks of specific exposure scenarios Completely updated with the latest information this book offers a concise introduction to the subject It is divided into five sections Principles in Toxicology Organ Toxicology Methods in Toxicology Regulatory Toxicology and Specific Toxicity The 2nd Edition adds new chapters that cover recent scientific and technological advances and current topics including the endocrine system alternatives to animal testing risk assessment and thresholds for carcinogens European and international regulation nanomaterials fuels fragrances and agrochemicals Concentrates on the basic concepts of toxicology and provides sufficient information for the reader to become familiar with them in order to understand the principles and to evaluate the risks at given exposures 30% new chapters cover recent scientific and technological advances

including alternatives to animal testing genotoxic carcinogens REACH regulations nanomaterials fuels fragrances PAHs and agrochemicals Written by a team of international specialists and edited by two outstanding scientists in the field Fully updated and expanded Toxicology and Risk Assessment A Comprehensive Introduction Second Edition is an essential text for any student or researcher with an interest in toxicology and related risk assessments **Primary Education in Malawi** Vaikalathur Ravishankar,Safaa El-Tayeb El-Kogali,Deepa Sankar,Nobuyuki Tanaka,Nelly Rakoto-Tiana,2016-04-06 The objective of this report is to inform an improved understanding of expenditure allocations and processes the quality of service delivery in terms of inputs and outputs and educational outcomes associated with primary education in Malawi The report will also assess the government s own diagnosis of challenges in the primary education sub sector and the reform program intended to address them The findings of this report are intended to inform discussions as to how to strengthen the government program and associated financing mechanisms to enhance the likelihood of success Environmental Neuroscience National Academies of Sciences, Engineering, and Medicine,Division on Earth and Life Studies,Health and Medicine Division,Board on Environmental Studies and Toxicology,Board on Health Sciences Policy,Forum on Neuroscience and Nervous System Disorders,2021-01-22 Humans are potentially exposed to more than 80 000 toxic chemicals in the environment yet their impacts on brain health and disease are not well understood The sheer number of these chemicals has overwhelmed the ability to determine their individual toxicity much less potential interactive effects Early life exposures to chemicals can have permanent consequences for neurodevelopment and for neurodegeneration in later life Toxic effects resulting from chemical exposure can interact with other risk factors such as prenatal stress and persistence of some chemicals in the brain over time may result in cumulative toxicity Because neurodevelopmental and neurodegenerative disorders such as attention deficit hyperactivity disorder and Parkinson s disease cannot be fully explained by genetic risk factors alone understanding the role of individual environmental chemical exposures is critical On June 25 2020 the National Academies of Sciences Engineering and Medicine s Forum on Neuroscience and Nervous System Disorders hosted a workshop to lay the foundation for future advances in environmental neuroscience The workshop was designed to explore new opportunities to bridge the gap between what is known about the genetic contribution to brain disorders and what is known and not known about the contribution of environmental influences as well as to discuss what is known about how genetic and environmental factors interact This publication summarizes the presentation and discussion of the workshop

Whitacre,2014-11-03 Reviews of Environmental Contamination and Toxicology attempts to provide concise critical reviews of timely advances philosophy and significant areas of accomplished or needed endeavor in the total field of xenobiotics in any segment of the environment as well as toxicological implications **Ethylenethiourea** Sam Stuart,2013-10-22 Ethylenethiourea focuses on the occurrence of ethylenethiourea ETU as a terminal residue resulting from agricultural use of ethylenebisdithiocarbamate EBDC

fungicides The book first states that EBDC forms the most essential class of fungicides for controlling diseases of agricultural crops The class includes mancozeb maneb nabam metiram and zineb The text also underscores that findings have shown that ETU may occur in plant samples after the use of dithiocarbamate fungicides Methodologies used in the experiments include thin layer chromatography polarography and radioisotope The publication offers information on the chemistry of ETU including formation transformation products of ETU photooxidation and soil plant and animal metabolism The book also reviews the dynamics and transformation of ETU residues and the processing and cooking effects of EBDC s The book is a dependable reference for readers interested in the composition reactions effects and transformations of EBDC fungicides

*Neural Dynamics of Neurological Disease* Christopher A. Shaw, 2017-02-15 The emerging understanding of age related neurological disorders suggests that notions of a single causal gene toxin being responsible is likely incorrect Neurological disorders probably arise due to a unique intersection of multiple genetic and toxic factors combined with additional contributions of age stage of development immune system actions and more This perspective leads to the view that rather than reflecting only one pathway to end state disease each is a spectrum disorder and every individual case is therefore unique *Neural Dynamics of Neurological Disease* argues for a fundamental rethinking of what we think we know about neurological disorders how they arise and progress and crucially what might be done to cure them It first introduces the concept of neural dynamics of neurological disease then examines various diseases and gives examples of the interplay of elements such as neural systems cell types and biochemical pathways that can contribute to disease The concluding chapters point the way to how the emerging notion of neurological disease as a dynamic process may lead to more successful treatment options Providing a cross disciplinary approach to understanding the origin and progression of neurological disease *Neural Dynamics of Neurological Disease* is a timely and valuable resource for neuroscientists researchers and clinicians

*Neurodegeneration: From Genetics to Molecules* Victoria Campos-Peña, Marco Antonio Meraz-Ríos, Rosalinda Guevara-Guzmán, Karla Guadalupe Carvajal, 2016-11-15 Chronic degenerative diseases are one of the major public health problems particularly those affecting the nervous system They are characterized by the degeneration of specific cell populations that include several pathologies which contribute significantly to morbidity and mortality in the elderly population Therefore in recent years the study of neuroscience has gained significant importance Most of these neurodegenerative disorders are the result of a complex interaction between genetic and environmental factors that generate progression and can even determine its severity The presence of mutations in genes as LRRK2 SNCA PARK7 PARK2 or PINK1 is associated with Parkinson s disease Mutations in genes such as APP PS1 and PS2 are associated with familial Alzheimer s disease while HTT gene mutations are the cause of Huntington s disease In most cases this condition is inherited in an autosomal dominant pattern which means one copy of the altered gene in each cell is sufficient to cause the disorder It is known that these mutations can also alter the proteins function however it has not yet been possible to fully understand

how some genetic changes cause the disease or influence the risk of developing these disorders Most symptoms seen in these conditions occurs when specific nerve cells are damaged or die generating a loss in brain communication Also many of these mutations generate aggregation of intracellular or extracellular proteins affecting cell function and eventually causing neuronal death It is unclear whether the presence of these aggregates play an important role in nerve cell death during the development of neurodegenerative diseases or if they are simply part of the response of cells to the disease Other mutations affect the mitochondrial function generating alterations in energy production and promoting the formation of unstable molecules such as free radicals Under normal conditions the harmful effects caused by free radicals are offset within the cell However in pathological conditions the presence of mutations can alter this process by allowing the accumulation of radicals and damaging or killing cells On the other hand we also know that these diseases may not have a direct genetic component thus the study of sporadic type neurodegenerative diseases is much more complex Histopathological lesions as well as the cellular and molecular alterations are generally indistinguishable from familial cases For this reason it is important to understand the genetic and molecular mechanisms associated with this type of pathologies In this sense this issue aims to understand the molecular processes that occur in the brain and how these are influenced by the environment genetics and behavior

*Insecticides* Stanislav Trdan, 2013-01-30 This book contains 20 chapters about the impact environmental fate modes of action efficacy and non target effects of insecticides The chapters are divided into 7 parts Part 1 covers the non target effects of insecticides whereas part 2 is dedicated to integrated methods for pest control in which insecticides are an important element for diminishing the populations of insect pests Part 3 includes chapters about the non chemical alternatives to insecticides such as metabolic stress and plant extracts Insecticides and human health are the main topic of part 4 and the interactions between insecticides and environment are discussed in part 5 Part 6 includes the chapters about insecticides against pests of urban areas forests and farm animals whereas biotechnology and other advances in pest control are discussed in part 7
