Industrial Construction Estimating Manual Kenneth Storm, 2020-05-27. Industrial Construction Estimating Manual focuses on industrial process plants and enables the contractor, subcontractor, and engineer to use methods, models, procedures, formats, and technical data for developing industrial process plant construction estimates. The manual begins with an introduction devoted to labor data collection, verification of data, coding, productivity measurement, the unit quantity model, and computer-aided cost estimating. It goes on to provide information on construction materials, database systems, work estimating, computer-aided estimating, detailed labor estimates, bid assurance, and detailed applications to construction. Practical examples based on historical data collected from past installations are also included, as well as a detailed glossary, Excel, and mathematical formulas, metric standard conversions, area and volume formulas, and boiler man-hour tables. Industrial Construction Estimating Manual aids contractors, subcontractors, and engineers with a balance, detailed estimating method using the unit quantity model and is an excellent resource for those involved in engineering technology and construction estimating. Provides a detailed estimating method using the unit quantity model to prepare construction estimates. Delivers information on construction materials, databases, labor estimates, computer-aided estimating, bid assurance, and applications to construction. Utilizes historical data from a database of previous similar work, calculates material cost and labor by category, and produces both summary and detailed man-hour and cost estimates.
