*Recapturing Space: New Middle-Range Theory in Spatial Demography* Frank M. Howell, Jeremy R. Porter, Stephen A. Matthews, 2015-11-04

With a unique focus on middle-range theory, this book details the application of spatial analysis to demographic research as a way of integrating and better understanding the different transitional components of the overall demographic transition. This book first details key concepts and measures in modern spatial demography and shows how they can be applied to middle-range theory to better understand people, places, communities, and relationships throughout the world. Next, it shows middle-range theory in practice, from using spatial data as a proxy for social science statistics to examining the effect of fracking in Pennsylvania on the formation of new coalitions among environmental advocacy organizations. The book also traces future developments and offers some potential solutions to promoting and facilitating instruction in spatial demography. This volume is an ideal resource for advanced undergraduate and graduate students enrolled in courses involving spatial analyses in the social sciences, from sociology and political science to economics and educational research. In addition, scholars and others interested in the role that geographic context plays in relation to their research will find this book a helpful guide in further developing their work.

**Food Tourism and Regional Development** C. Michael Hall, Stefan Gössling, 2016-05-26

Food tourism is a topic of increasing importance for many destinations. Seen as a means to potentially attract tourists and differentiate destinations and attractions by means of the association with particular products and cuisines, food is also regarded as an opportunity to generate added value from tourism through local agricultural systems and supply chains and the local food system. From a regional development perspective, this book goes beyond culinary tourism to also look at some of the ways in which the interrelationships between food and tourism contribute to the economic, environmental, and social wellbeing of destinations, communities, and producers. It examines the way in which tourism and food can mutually add value for each other, from the fork to the plate and beyond. Looking at products, e.g., cheese

craft beer noodles wine attractions restaurants and events and diverse regional examples e g Champagne Hong Kong Jamaica Margaret River southern Sweden and Tuscany the title highlights how clustering networking and the cultural economy of food and tourism and foodscapes adds value for regions Despite the attention given to food wine and culinary tourism no book has previously directly focused on the contribution of food and tourism in regional development This international collection has contributors and examples from almost every continent and provides a comprehensive account of the various intersections between food tourism and regional development This timely and significant volume will inform future food and tourism development as well as regional development more widely and will be valuable reading for a range of disciplines including tourism development studies food and culinary studies regional studies geography and environmental studies
