

The human body as a functioning object – even a miracle of design and engineering? Just like an ecosystem, but the published (e.g., corporate, population, social) data the human body can also be divided into levels of organization. From largest to smallest, the levels of organization in the human body are organism, organ system, organ, tissue, and cell.

It all starts with tiny, microscopic units of life called cells. These minuscule objects have a job without you even knowing it. Through all daily posture functions that keep you alive, they all share a specialized purpose: function or job. Some cells send electrical signals to the brain and are called nerve cells. Others are called muscle cells, carrying tension throughout the body and are called red blood cells.

All groups of cells known as tissues work together to perform the basic functions in the body. One type of tissue is called connective tissue, which connects and holds the body together. There are three types of connective tissues: blood (connective tissue), bone (connective tissue), and adipose (connective tissue). Epithelial tissues cover the surface of the body and the organs. One can also see muscle in skin. Connective tissue connects all the parts of the body and provides support.

Group of tissues that perform a common function. One example of an organ is the heart, which is made up of connective tissue, nerve tissue, and cardiac muscle tissue. Although the tissues in organs have specific jobs, their efforts together is what the organ does.

All groups of two or more organs that work together to perform a specific function are called an organ system. The human body has eleven organ systems and each of them have a specific job or role. The circulatory system helps you transport gases and nutrients throughout your body – it includes the blood, heart, and blood vessels. The respiratory system helps you breathe and exchange gases – it includes the nose, trachea, bronchi, and lungs. The excretory system helps you get rid of wastes, while the digestive system helps you digest food.
