

## Life Sciences Grade 11

### Gaseous exchange:

The point of cellular respiration is that it provides cells with energy to perform life processes. Without it we would not be able to grow, maintain a constant body temperature, and perform certain chemical reactions in the cell.

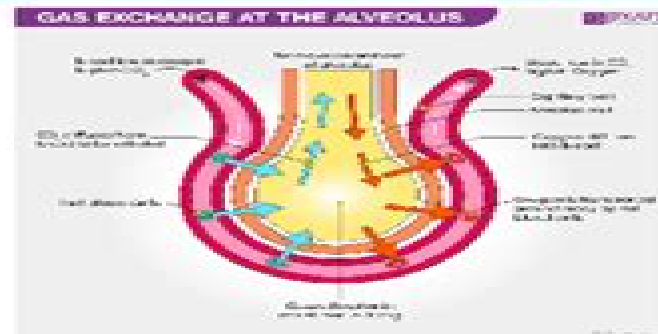

Remember that:

**Glucose + Oxygen = Energy (ATP) + Carbon dioxide + Water**

We eat the glucose and it moves from the digestive system in the blood to the liver where it is regulated and moves in the blood plasma to all cells of the body.

We inhale oxygen, and that is the purpose of the respiratory system, to suck oxygen in, from the lungs the oxygen moves into the blood and is transported (mainly in the red blood cells) to all cells in the body.

Carbon dioxide is formed in body cells and that it needs to be transported away from the body cells to the lungs, via the blood, where it is exhaled.
