

Study Guide Holt Physics Chapter 3—Two-dimensional Motion and Vectors

I. Section 3-1—Introduction to Vectors

A. Scalars and Vectors

1. Magnitude and Direction

- In chapter 2 we discussed velocity. Velocity has both a magnitude and a direction.
- Magnitude**: a measurement represented by a number (e.g. -12 meters/second)
- Direction**: an indication of orientation. For velocities we use a positive number for right or up and a negative number for left or down.

2. Velocity is an example of a **VECTOR**. Vectors always have both a direction and a magnitude

- Vectors are differentiated from scalars in your book by using **BOLD** type.
- Vectors are also represented by arrows. The longer the arrow the more magnitude the vector has.

3. Speed is an example of a **SCALAR**. Scalars only have a magnitude.

B. Properties of vectors

1. Vectors can be added graphically

- When adding vectors, you must make sure that they have the same units and describe similar quantities.
- The answer found by adding vectors together is called the **resultant**.

Figure 3(a)

Figure 3(b)

- Vectors can only be moved parallel to themselves in a diagram. (see fig 3.3 on p.86)

Holt Physics Raymond A. Serway, 2002 **Numerical Methods in Fluid Dynamics** Maurice Holt, 2012-12-06 From the reviews of the first edition This book is directed to graduate students and research workers interested in the numerical solution of problems of fluid dynamics primarily those arising in high speed flow The book is well arranged logically presented and well illustrated It contains several FORTRAN programmes with which students could experiment It is a practical book with emphasis on methods and their implementation It is an excellent text for the fruitful research area it covers and is highly recommended *Journal of Fluid Mechanics* 1 From the reviews of the second edition The arrangement of chapters in the book remains practically the same as that in the first edition 1977 except for the inclusion of Glimm's method This book is highly recommended for both graduate students and researchers *Applied Mechanics Reviews* 1 *Turbulent Shear Flows* 4 L.J.S. Bradbury, F. Durst, B.E. Launder, F.W. Schmidt, J.H. Whitelaw, 2012-12-06 The Fourth International Symposium on Turbulent Shear Flows took place at Karlsruhe University in Germany The papers presented at this Symposium encompassed a similar range to that of the previous meetings with greater emphasis placed on experimental work and continued a trend towards the examination of complex flows Once again three dimensional recirculating and reacting flows featured strongly in the programme and were complemented by consideration of two phase flows and discussions of both numerical and experimental techniques The Symposium brought together some 300 participants from all over the world and it was evident that there is a need for Turbulent Shear Flows Symposia in order to obtain and communicate new information useful to researchers in the field of turbulent flows and of interest to engineers who design flow equipment This volume contains 27 papers selected from more than 100 presentations at the Symposium which have been reviewed and edited before publication Together they provide an indication of the status of current knowledge on the subjects represented at the Symposium They are grouped into four sections namely Fundamentals Free Flows Boundary Layers Reacting Flows As in previous volumes in this series each section begins with an introductory article considering the papers which follow in the broader context of available literature and current research Computer Studies of Phase Transitions and Critical Phenomena Ole G. University of Southern Denmark, 2012-12-06 This book is based on research carried out by the author in close collaboration with a number of colleagues In particular I wish to thank Per Bak A John Berlinsky Hans C Fogedby Barry Frank S 1 Knak Jensen David Mukamel David Pink and Martin Zuckermann for fruitful and extremely stimulating cooperation It is a pleasure for me to note that active interaction with most of these colleagues is still continuing The work has been performed at several different institutions notably the Department of Chemistry Aarhus University Denmark and the Department of Physics University of British Columbia Canada I wish to thank the Department of Chemistry at Aarhus University for providing me with splendid research facilities over the years From May 1980 to August 1981 I visited the Department of Physics at the University of British Columbia and I would like to express my sincere

gratitude to members of the department for providing me with excellent working conditions. My special thanks are due to Professor Myer Bloom who introduced me to the field of phase transitions in biological membranes and in whose biomembrane group I found an extremely stimulating scientific atmosphere happily married with a most agreeable social climate. During the last two years when a major part of this work was carried out I was supported by ALS De Danske Spritfabrikker through their Jubilæumslegat of 1981. Their support is gratefully acknowledged.

Modern Physics Paul Allen Tipler, Ralph Llewellyn, 2003. Problems in Thermodynamics and Statistical Physics Peter T. Landsberg, 2014-06-10. Well-respected, widely used volume presents problems and full solutions related to a wide range of topics in thermodynamics, statistical physics, statistical mechanics. Suitable for undergraduates and graduate students. Self-study reference. 1989 edition.

The Method of Differential Approximation Y.I. Shokin, 1983-05. I am very glad that this book is now accessible to English-speaking scientists. During the three years following the publication of the original Russian edition, the method of differential approximation has been rapidly expanded and unfortunately I was unable to incorporate into the English edition all of the material which would have reflected its present state of development. Nevertheless, a considerable amount of recently obtained results have been added and the bibliography has been enlarged accordingly so that the English edition is one-third longer than the Russian original. Mathematical rigorousness is a basic feature of this monograph. The reader should therefore be familiar with the theory of partial differential equations and difference equations. Some knowledge of group theory as applied to problems in physics, especially the theory of Lie groups, would also be useful. The treatment of the approximation of gas dynamic equations focuses on the question of how to characterize the typical features of difference equations on the basis of the related differential approximation which can be discussed using the fully developed theory of partial differential equations.
