Olga Maria Stefania Cucaro, 2022-02-08 This book aims to initiate those who want to independently create a website to the world of domains and programming linked to the web The author conceived this work as a scientific work intended for educational and study use for all those who approach the study of client side and server side programming In the first place the difference between the various domains existing on the network will be explained and at a later time we will try to explain the CSS and HTML and then enter the PHP programming server side and JavaScript client side with the creation of databases via phpMyAdmin All this will be explained through an example website created specifically using a free Bootstrap for simplicity and basic convenience and programming a control panel with login connected to the site via database for inserting images directly from the web by uploading them to the database created with connected phpMyAdmin to the site

Obviously after entering the world of databases and programming you can apply this knowledge to any other need for iteration by the user required by the site project The aim of this study is not to create simple web pages that today can be done easily with WordPress or other easy to use software but for purely educational purposes to explain the use of databases and server and client side programming to make a dynamic otherwise static site In summary this work can be useful for those who want to approach the fascinating world of website programming from the beginning

West,2014-01-24 Practical PHP and MySQL Website Databases is a project oriented book that demystifies building interactive database driven websites The focus is on getting you up and running as quickly as possible In the first two chapters you will set up your development and testing environment and then build your first PHP and MySQL database driven website You will then increase its sophistication security and functionality throughout the course of the book The PHP required is taught in context within each project so you can quickly learn how PHP integrates with MySQL to create powerful database driven websites

Each project is fully illustrated so you will see clearly what you are building as you create your own database driven website. You will build a form for registering users and then build an interface so that an administrator can view and administer the user database. You will create a message board for users and a method for emailing them. You will also learn the best practices for ensuring that your website databases are secure. Later chapters describe how to create a blog, a product catalog, and a simple e-commerce site. You will also discover how to migrate a database to a remote host. Because you are building the interactive pages yourself, you will know exactly how the MySQL and PHP work and you will be able to add database interactivity to your own websites with ease.
