tion of tire rotation. Another way is to install wheel and tire on other axle. After a few hours service, retighten the special bolts and keep them tight.

CHANGING RIM POSITION ON WHEEL

On tractors with 18.4-38 tires that have a double rim ring, the clamps may be bolted to either side of the wheel and can engage either one of the two raised rings on the rim. This gives four possible rim positions on the wheel as shown in the tread chart on page 13.

On offset deep well rims (18.4-34 and 24.5-32 tires), two possible rim positions are obtained by reversing the offset deep well. To maintain proper direction of tire rotation, install rim and tire on other wheel. On standard tractors with single 24.5-32 tires, the offset rim must always be mounted in the narrow tread position.

To change the position of the rim on the wheel, jack up the tractor until there is little or no weight on the tire. Remove the rim clamps and shift the rim or wheel to the desired position. Install the clamps and tighten evenly. Be sure that each of the seven rim driving lugs engages a clamp that has a wheel driving lug as shown in the illustration.

Hammer each bolt head to seat the bolts. Retighten the clamps to 170 ft-lbs torque. Adjust both rear wheels in the same manner.

After a few hours service, **RETIGHTEN** the clamps and keep them tight.

CAUTION: Never operate the tractor when the rim clamp nuts or hub cap screws are loose.

Rim Driving Lug and Wheel Driving Lug

DOUBLE REAR WHEEL ADJUSTMENT

If the tractor has 18.4-38 double rear tires, the minimum inner tire tread is 65 inches on standard tractors or 60 inches on row-crop tractors (64 inches if equipped with a cab). The maximum outer tire tread is 120 inches with 108 inch axles or 132 inches with 120 inch axles. The distance between tires should be at least 5 inches. See the wheel and tire position shown in the upper half of the illustration.

Double Rear Wheel Tread

If tractor is equipped with 18.4-34 double rear tires, set the inner tire 34 inches from center of tractor. Set the outer tire 56 inches from center of the tractor. See the wheel and tire position in the lower half of the illustration.

If equipped with 24.5-32 double rear tires, set the inner tire 35 inches from the center of the tractor and the outer tire to 65 inches. If equipped with 24.5-32 and 18.4-38 double rear tires, set the inner tire to 35 inches from the center of the tractor and the outer tire between 62 and 66 inches from the center of the tractor.

Tighten inner wheel clamps and bolts *securely* because the outer wheel usually must be removed to retighten them.

NOTE: When installing first outer double wheel, tractor will tip if jack is under drawbar support.
