Gusset Plate Design Guide:

Structural Design Guide Edward S. Hoffman, David P. Gustafson, Albert J. Gouwens, Paul F. Rice, 2012-12-06 I I This book is intended to guide practicing structural engineers into more profitable routine designs with the AISC Load and Resistance Factor Design Specification LRFD for structural steel buildings LRFD is a method of proportioning steel structures so that no applicable limit state is exceeded when the structure is subjected to all appropriate factored load combinations Strength limit states are related to safety and concern maximum load carrying capacity Serviceability limit states are related to performance under service load conditions such as deflections The term resistance includes both strength states and serviceability limit states LRFD is a new approach to the design of structural steel for buildings It involves explicit consideration of limit states multiple load factors and resistance factors and implicit probabilistic determination of reliability The type of factoring used by LRFD differs from the allowable stress design of Chapters A through M of the 1989 Ninth Edition of the AISC Specifications for Allowable Stress Design where only the resistance is divided by a factor of safety to obtain an allowable stress and from the plastic design provisions of Chapter N where the loads are multiplied by a common load factor of 1.7 for gravity loads and 1.3 for gravity loads acting with wind or seismic loads LRFD offers the structural engineer greater flexibility rationality and economy than the previous 1989 Ninth Edition of the AISC Specifications for Allowable Stress Design The Planning Guide to Piping Design Richard Beale, Paul Bowers, 2017-10-22 The Planning Guide to Piping Design Second Edition covers the entire process of managing and executing project piping designs from conceptual to mechanical completion also explaining what roles and responsibilities are required of the piping lead during the process The book explains proven piping design methods in step by step processes that cover the increasing use of new technologies and software Extended coverage is provided for the piping lead to manage piping design activities which include supervising planning scheduling evaluating manpower monitoring progress and communicating the piping design With newly revised chapters and the addition of a chapter on CAD software the book provides the mentorship for piping leads engineers and designers to grasp the requirements of piping supervision in the modern age Provides essential standards specifications and checklists and their importance in the initial set up phase of piping project s execution Explains and provides real world examples of key procedures that the piping lead can use to monitor progress Describes project deliverables for both small and complex size projects Offers newly revised chapters including a new chapter on CAD software *AASHTO Guide Specifications for LRFD Seismic Bridge Design*, 2011 This work offers guidance on bridge design for extreme events induced by human beings This document provides the designer with information on the response of concrete bridge columns subjected to blast loads as well as blast resistant design and detailing guidelines and analytical models of blast load distribution The content of this guideline should be considered in situations where resisting blast loads is deemed warranted by the owner or designer Theory and Design of Railway Truss
