The Bottom of the Main Sequence – And Beyond Christopher G. Tinney,2013-06-29 The proceedings of this workshop should probably be prefaced with a few words on some of the more confusing jargon The phrases Very Low Mass star VLM star or simply VLM are now used fairly uniformly by astronomers studying the stars at the bottom of the hydrogen burning stellar main sequence unfortunately however there is no clear definition as to what constitutes a VLM star The reader should be warned that VLM stars are variously considered to be stars with masses less than 0.3 M_{\odot} masses 0 less than 0.1 M_{\odot} spectra later than about M6.7 luminosities fainter than 0.15 M_{\odot} or luminosities fainter than $M_{\text{bol}} 12$ The important features of a VLM star however would seem to be 1 that it is about as faint as a star can be and 2 that it still remains a star ie it still burns hydrogen All of the above criteria therefore would seem to qualify an object as a VLM star and requiring a more stringent definition is probably quibbling
