

Activity B:
Measuring
half-life

Get the Gizmo ready:

- Click **Reset**.
- Select **Isotope A** from the left drop-down menu.
- Check that **Theoretical decay** is selected.

Introduction: Different **isotopes** of the same element have the same number of protons but different numbers of **neutrons** in the nucleus. Some isotopes are radioactive.

Question: How do we find the half-life of a radioactive isotope?

1. Observe: Select the **GRAPH** tab, and click **Play**. Based on the graph, what is your estimate of the half-life of isotope A?

15

2. Measure: Turn on the **Half-life probe**. Use the probe to measure how long it takes for exactly one-half of the original radioactive atoms to decay.

What is the exact half-life of isotope A?

31

3. Collect data: In the first row of the table below, write how many seconds represent one half-life, two half-lives, and so forth. On the next row, predict the number of radioactive atoms that will be present at each time. Then use the probe to find the actual values.

Half-life	0	1	2	3	4	5
Time (seconds)		31	62	94	125	155
Predicted # radioactive atoms	128	64	32	16	8	4
Actual # radioactive atoms	128	64	32	16	8	4

4. Calculate: Calculate the percentage of radioactive atoms that are left after each half-life.

Half-life	0	1	2	3	4	5
Percentage radioactive atoms	100	50	25	12.5	6.25	3.125

5. Apply: Suppose you found a material in which 12.5% of the original radioactive atoms were present. If the half-life is 47 years, how old is the material?

around 200 years of age

Calculus Harley Flanders,2013-03-09 Preface Objectives of This Book To teach calculus as a laboratory science with the computer and software as the lab and to use this lab as an essential tool in learning and using calculus To present calculus and elementary differential equations with a minimum of fuss through practice not theory To stress ideas of calculus applications and problem solving rather than definitions theorems and proofs Toemphasize numerical aspects approximations order of magnitude concrete answers to problems To organize the topics consistent with the needs of students in their concurrent science and engineering courses The subject matter of calculus courses has developed over many years much by negotiation with the disciplines calculus serves particularly engineering This text covers the standard topics in their conventional order Mostly because of commercial pressures calculus texts have grown larger and larger trying to include everything that anyone conceivably would cover Calculus texts have also added more and more expensive pizzazz up to four colors now This text is lean it eliminates most of the fat of recent calculus texts it has a simple physical black white format it

ignores much of current calculus culture The computer has forced basic changes in emphasis and how to teach calculus

Fundamentals of Systems Biology Markus W. Covert, 2017-10-19 For decades biology has focused on decoding cellular processes one gene at a time but many of the most pressing biological questions as well as diseases such as cancer and heart disease are related to complex systems involving the interaction of hundreds or even thousands of gene products and other factors How do we begin to understand this complexity Fundamentals of Systems Biology From Synthetic Circuits to Whole cell Models introduces students to methods they can use to tackle complex systems head on carefully walking them through studies that comprise the foundation and frontier of systems biology The first section of the book focuses on bringing students quickly up to speed with a variety of modeling methods in the context of a synthetic biological circuit This innovative approach builds intuition about the strengths and weaknesses of each method and becomes critical in the book's second half where much more complicated network models are addressed including transcriptional signaling metabolic and even integrated multi network models The approach makes the work much more accessible to novices undergraduates medical students and biologists new to mathematical modeling while still having much to offer experienced modelers whether their interests are microbes organs whole organisms diseases synthetic biology or just about any field that investigates living systems
