Career Exploration Paper: Psychology and Pediatrics.

My research question is "Why would pursuing a major in psychology help me pursue a career as a pediatrician after school"? You may be asking yourself what a pediatrician do. It's relatively simpler to ask what a pediatrician doesn't do since they can be associated with such a number of basic parts of a kid's well-being and advancement from birth to adulthood. Since the kind of patients and issues fluctuate so incredibly, pediatricians specifically always have a wide range of ages in their everyday work life so knowledge in how the brain matures and processes throughout the newborn to adult stage is important, which leads me to the interest of psychology. Psychology is the scientific study of the mind and behavior. psychology is a furthermore a multifaceted area of study and incorporates numerous sub-fields of analysis and research in human advancement, sports, well-being, clinical, social conduct and experimental procedures.

Since psychological research is a science, it sets out to examine the reasons for behavior and using methodology for perception, estimation and analysis, supported by hypothetical explanations, speculations, clarifications and predictions. With its expansive degree, psychology explores a colossal scope of wonders of learning and memory, sensation and observation, what keeps us motivated and what affects our emotions, which factors affect the way we think and speak, and child development and the list goes on.
