Technology has become increasingly important to both the function and our understanding of the justice process. Many forms of criminal behaviour are highly dependent upon technology and crime control has become a predominantly technologically driven process one where traditional technological aids such as fingerprinting or blood sample analysis are supplemented by a dizzying array of tools and techniques including surveillance devices and DNA profiling. This book offers the first comprehensive and holistic overview of global research on technology crime and justice. It is divided into five parts each corresponding with the key stages of the offending and justice process. Part I addresses the current conceptual understanding of technology within academia and the criminal justice system. Part II gives a comprehensive overview of the current relations between technology and criminal behaviour. Part III explores the current technologies within crime control and the ways in which technology underpins contemporary formal and informal social control. Part IV sets out some of the fundamental impacts technology is now having upon the judicial process. Part V reveals the emerging technologies for crime control and justice and considers the extent to which new technology can be effectively regulated. This landmark collection will be essential reading for academics, students and theorists within criminology, sociology, law, engineering and technology and computer science as well as practitioners and professionals working within and around the criminal justice system.

Dissecting the Hack Jayson E Street, 2015-07-20. *Dissecting the Hack: The V3rb0t3n Network* ventures further into cutting edge techniques and methods than its predecessor *Dissecting the Hack: The F0rb1dd3n Network*. It forgoes the basics and delves straight into the action as our heroes are chased around the world in a global race against the clock. The danger they face will forever reshape their lives and the price they pay for their actions will not only affect themselves but could possibly shake the foundations of an entire nation. The book is divided into two parts. The first part, entitled *The V3rb0t3n Network*, continues the fictional story of Bob and Leon, two hackers caught up in an adventure in which they learn the deadly consequence of digital actions. The second part, *Security Threats Are Real*, focuses on these real world lessons and advanced techniques as used by characters in the story. This gives the reader not only textbook knowledge but real world context around how cyber attacks may manifest. *The V3rb0t3n Network* can be read as a stand alone story or as an illustration of the issues described in *STAR*. Scattered throughout *The V3rb0t3n Network* are Easter eggs, references, hints, phrases and more that will lead readers to insights into hacker culture. Drawing on *The V3rb0t3n Network*, *STAR* explains the various aspects of reconnaissance: the scanning phase of an attack, the attacker's search for network weaknesses and vulnerabilities to exploit, the various angles of attack used by the characters in the story, basic methods of erasing information and obscuring an attacker's presence on a computer system and the underlying hacking culture. All new volume of *Dissecting the Hack* by Jayson Street with technical edit by Brian Martin.
