Bakley,2016-08-29 The Experiment at Philadelphia Did Einstein discover God If God created all things then who Created God What Was and Happened Before the Big Bang The Philadelphia Experiment was Einsteins experiment in which he had not only discovered in 1943 the way to make things invisible and transport them at great speeds but also positively proven scientifically physically and spiritually that the Almighty God exists He had literally discovered God That question is there a god Thats been going through peoples minds for so long was discussed on the street corner talked about on the porch on a hot summers night and is now a proven fact Yes there is a god Did Einstein in the Philadelphia Experiment make contact with UFO beings who gave him advance knowledge of all things which Einstein later destroyed fearing what the world would do with that knowledge Are the first fourteen chapters of this book about the advance knowledge Einstein received Does it reveal the deepest darkest secrets of God and Satan and how the universe works Does it answer these questions Many have asked since the beginning of the world Which is known as the mystery of God Why am I here Whats the true meaning of life How was everything created Who are God and the devil If God created all who created God If he is the first in creation where and how did he come into existence Why does God allow evil in the world Why do good things happen to bad people and bad things to good people Whyif we all came from Adam and Eve who were Jewishare there Gentiles Are Gentiles children of devils Is that why the Jews are Gods chosen race Why in the Garden of Eden was the knowledge of good on the tree forbidden How old is the earth Why is God known as the Trinity Why have religions down through the ages done such evil What when and how did the big bang start What happened to Satan Who is he really and what did he do in the past What are his beliefs and ways What is he and God literally made of What is the meaning of the great pyramids and the sphinx Is there scientific proof that God exists Read this whole book for the answers to all these tough questions and be sure to read the introduction first before reading the rest of this book It will help you better understand this whole book **AR 58-1**

Genomic Selection: Lessons Learned and Perspectives Johannes W. R. Martini, Sarah J. Hearne, Brian Gardunia, Valentin Wimmer, Fernando H. Toledo, 2022-09-15

Genomic selection GS has been the most prominent topic in breeding science in the last two decades The continued interest is promoted by its huge potential impact on the efficiency of breeding Predicting a breeding value based on molecular markers and phenotypic values of relatives may be used to manipulate three parameters of the breeder's equation First the accuracy of the selection may be improved by predicting the genetic value more reliably when considering the records of relatives and the realized genomic relationship Secondly genotyping and predicting may be more cost effective than comprehensive phenotyping Resources can instead be allocated to increasing population sizes and selection intensity The third probably most important factor is time As shown in dairy cattle breeding reducing cycle time by crossing selection candidates earlier may have the strongest impact on selection gain Many different prediction models have been used and different ways of using predicted values in a breeding program have been explored We would like to address the questions i How did GS change breeding schemes of different crops in the last 20 years ii What was the impact on realized selection gain iii What would be the best structure of a crop specific breeding scheme to exploit the full potential of GS iv What is the potential of hybrid prediction epistasis effect models deep learning methods and other extensions of the standard prediction of additive effects v What are the long term effects of GS vi Can predictive breeding approaches also be used to harness genetic resources from germplasm banks in a more efficient way to adapt current germplasm to new environmental challenges This Research Topic welcomes submissions of Original Research papers Opinions Perspectives Reviews and Mini Reviews related to these themes 1 Genomic selection statistical methodology 2 The optimal use of GS in breeding schemes 3 Practical experiences with GS selection gain long term effects negative side effects 4 Predictive approaches to harness genetic resources Concerning point 1 If an original research paper compares different methods empirically without theoretical considerations on when one or the other method should be better the methods should be compared with at least five different data sets The data sets should differ either in crop genotyping method or its source for instance from a breeding program or gene bank accessions Concerning point 2 Manuscripts addressing the use of GS in breeding schemes should illustrate breeding schemes that are run in practice General ideas about schemes that may be run in the future may be considered as Perspective articles Conflict of Interest statements Topic Editor Valentin Wimmer is affiliated to KWS SAAT
