Electromagnetic Compatibility in Railways Ade Ogunsola,Andrea Mariscotti,2012-08-14 A railway is a complex distributed engineering system the construction of a new railway or the modernisation of a existing one requires a deep understanding of the constitutive components and their interaction inside the system itself and towards the outside world The former covers the various subsystems featuring a complex mix of high power sources sensitive safety critical systems intentional transmitters etc and their interaction including the specific functions and their relevance to safety The latter represents all the additional possible external victims and sources of electromagnetic interaction EMC thus starts from a comprehension of the emissions and immunity characteristics and the interactions between sources and victims with a strong relationship to electromagnetics and to system modeling On the other hand the said functions are achieved and preserved and their relevance for safety is adequately handled if the related requirements are well posed and managed throughout the process from the beginning The link is represented by standards and their correct application as a support to analysis testing and demonstration

Theory and Methods of Quantification Design on System-Level Electromagnetic Compatibility Donglin Su,Shuguo Xie,Fei Dai,Yan Liu,Yunfeng Jia,2019-03-05 This book systematically explains the fundamentals of system level electromagnetic compatibility and introduces the basic concept of system level electromagnetic compatibility quantification design The topics covered include the critical technologies in the top down quantification design of electromagnetic compatibility quantification design of system level electromagnetic compatibility evaluation methods and application examples quality control and application examples of electromagnetic compatibility development process and real world engineering example analysis of electromagnetic compatibility The book proposes a top down system level electromagnetic compatibility quantification design method and is the first book to describe in detail how to quantitatively evaluate and predict system level electromagnetic compatibility performance It includes abundant engineering examples and experimental data demonstrating the usage and results of the top down quantification design methods of system level electromagnetic compatibility It enables readers to obtain a thorough understanding of the theory and methods of system level electromagnetic compatibility quantification design as well as the methodologies for engineering practice

Electospace Planning and Engineering for the Air Traffic Environment Gary D. Gierhart, Robert W. Hubbard, Don V. Glen, 1970 License Manual 77th Ed/2nd Pr Wyland Dale Clift, 1981 *Scientific and Technical Aerospace Reports*, 1995 *Signal Integrity and Radiated Emission of High-Speed Digital Systems* Spartaco Caniggia, Francescaromana Maradei, 2008-11-20 Before putting digital systems for information technology or telecommunication applications on the market an essential requirement is to perform tests in order to comply with the limits of radiated emission imposed by the standards This book provides an investigation into signal integrity SI and electromagnetic interference EMI problems Topics such as reflections crosstalk switching noise and radiated emission RE in high speed digital systems are covered which are essential for IT and telecoms applications The highly important topic of modelling is covered which can reduce costs by enabling simulation data to demonstrate that a product meets design specifications and regulatory limits According to the new European EMC directive this can help to avoid the expensive use of large semi anechoic chambers or open area test sites for radiated emission assessments Following a short introduction to signalling and radiated interference in digital systems the book provides a detailed characterization of logic families in terms of static and dynamic characteristic useful for modelling techniques Crosstalk in multi coupled line structures are investigated by analytical graphical and circuit based methods and techniques to mitigate these phenomena are provided Grounding filtering and shielding with multilayer PCBs are also examined and design rules given Written by authors with

extensive experience in industry and academia Explains basic conceptual problems from a theoretical and practical point of view by using numerous measurements and simulations Presents models for mathematical and SPICE like circuit simulators Provides examples of using full wave codes for SI and RE investigations Companion website containing lists of codes and sample material Signal Integrity and Radiated Emission of High Speed Digital Systems is a valuable resource to industrial designers of information technology telecommunication equipment and automation equipment as well as to development engineers It will also be of interest to managers and designers of consumer electronics and researchers in electronics

Design Technology of System-Level EMC Engineering Xiaobin Tang,Bin Gao,Yu Zhang,2020-08-24 This book introduces the state of the art research progress of system level EMC including theories design technologies principles and applications in practice The engineering design simulation prediction analysis test stage control as well as effectiveness evaluation are discussed in detail with extensive project experiences making the book an essential reference for researchers and industrial engineers Mobile Virtual Synchronous Machine for Vehicle-to-Grid Applications Christopher Pelczar,2012-03-23 The Mobile VISMA is a power electronics device for V2G applications which behaves like an electromechanical synchronous machine and offers the same beneficial properties to the power network increasing inertia in the system stabilizing the grid voltage and providing a short circuit current in case of grid faults The VISMA performs a real time simulation of a synchronous machine and calculates the phase currents that an electromagnetic synchronous machine would produce under the same local grid conditions These currents are fed into the grid using a current controlled inverter In this dissertation the requirements for a machine model suitable for the VISMA are set and a mathematical model suitable for use in the VISMA algorithm is found and implemented A new hardware architecture for the Mobile VISMA based on microcontroller and FPGA technologies is presented The new architecture allows the reduction of the size and cost of the VISMA making it suitable for installation in electric vehicles A simulation model of the inverter hardware and hysteresis current controller is created and validated by experiment The verified hardware model is then used to design a new type of PWM based current controller The performance of the hysteresis and PWM based current controllers is evaluated and compared Finally the behavior of the VISMA during power network faults is examined and it is shown that the VISMA inverter hardware and current controllers are capable of fault ride through and can support the power network during faults
