Espaces 4e SE (Loose-Leaf) Vista Higher Learning, Incorporated, 2018-03 **Riemannian Geometry in an Orthogonal Frame** Elie Cartan, Sergei Pavlovich Finikov, 2001 Elie Cartan's book *Geometry of Riemannian Manifolds* 1928 was one of the best introductions to his methods. It was based on lectures given by the author at the Sorbonne in the academic year 1925-26. A modernized and extensively augmented edition appeared in 1946. 2nd printing 1951 and 3rd printing 1988. Cartan's lectures in 1926-27 were different; he introduced exterior forms at the very beginning and used extensively orthonormal frames throughout to investigate the geometry of Riemannian manifolds. In this course he solved a series of problems in Euclidean and non-Euclidean spaces as well as a series of variational problems on geodesics. The lectures were translated into Russian in the book *Riemannian Geometry in an Orthogonal Frame* 1960. This book has many innovations such as the notion of intrinsic normal differentiation and the Gaussian torsion of a submanifold in a Euclidean multidimensional space or in a space of constant curvature; an affine connection defined in a normal fiber bundle of a submanifold, etc. The only book of Elie Cartan that was not available in English; it has now been translated into English by Vladislav V. Goldberg, the editor of the Russian edition. **Riemannian Geometry In An Orthogonal Frame**, 2001-12-10 Foreword by S. S. Chern. In 1926-27 Cartan gave a series of lectures in which he introduced exterior forms at the very beginning and used extensively orthogonal frames throughout to investigate the geometry of Riemannian manifolds. In this course he solved a series of problems in Euclidean and non-Euclidean spaces as well as a series of variational problems on geodesics. In 1960 Sergei P. Finikov translated from French into Russian his notes of these Cartan's lectures and published them as a book entitled *Riemannian Geometry in an Orthogonal Frame*. This book has many innovations such as the notion of intrinsic normal differentiation and the Gaussian torsion of a submanifold in a Euclidean multidimensional space or in a space of constant curvature; an affine connection defined in a normal fiber bundle of a submanifold, etc. It has now been translated into English by Vladislav V. Goldberg, currently Distinguished Professor of Mathematics at the New Jersey Institute of Technology, USA, who also edited the Russian edition. **Between Philosophy and Non-Philosophy** Donald A. Landes, Leonard Lawlor, Peter Gratton, 2016-11-01 Engages the work and career of a central figure in contemporary philosophy. Hugh J. Silverman was an inspiring scholar and teacher known for his work engaging and shaping phenomenology, hermeneutics, psychoanalysis, structuralism, poststructuralism, and deconstruction. As Professor of Philosophy and Comparative Literary and Cultural Studies at Stony Brook University, State University of New York, Silverman's work was marked by the 'between' a concept he developed to think the postmodern in the space between philosophy and non-philosophy. In this volume leading scholars explore and extend Silverman's philosophical contributions from reflections on the notions of care, time, and responsibility to presentations of the practices and possibilities of deconstruction itself. They provide an assessment of Silverman's life and work at the intersection of philosophy, ethics, and politics. **Basic Modern Theory of**

Linear Complex Analytic q -Difference Equations Jacques Sauloy, 2024-11-06 The roots of the modern theories of differential and q difference equations go back in part to an article by George D Birkhoff published in 1913 dealing with the three sister theories of differential difference and q difference equations This book is about q difference equations and focuses on techniques inspired by differential equations in line with Birkhoff's work as revived over the last three decades It follows the approach of the Ramis school mixing algebraic and analytic methods While it uses some q calculus and is illustrated by q special functions these are not its main subjects After a gentle historical introduction with emphasis on mathematics and a thorough study of basic problems such as elementary q functions elementary q calculus and low order equations a detailed algebraic and analytic study of scalar equations is followed by the usual process of transforming them into systems and back again The structural algebraic and analytic properties of systems are then described using q difference modules Newton polygon filtration by the slopes The final chapters deal with Fuchsian and irregular equations and systems including their resolution classification Riemann Hilbert correspondence and Galois theory Nine appendices complete the book and aim to help the reader by providing some fundamental yet not universally taught facts There are 535 exercises of various styles and levels of difficulty The main prerequisites are general algebra and analysis as taught in the first three years of university The book will be of interest to expert and non expert researchers as well as graduate students in mathematics and physics
