**$C > B > A = D$  [  $C > B > D > A$  and  $C > B > D > A$  are acceptable ]**

4. Move the bar magnet through the coil and observe the motion of the electrons in the forward arc of the coil loops. Report the correlations of magnet motion and electron motion.

*Information & Experimental Knowledge* James Mattingly,2021-12-13 An ambitious new model of experimentation that will reorient our understanding of the key features of experimental practice What is experimental knowledge and how do we get it While there is general agreement that experiment is a crucial source of scientific knowledge how experiment generates that knowledge is far more contentious In this book philosopher of science James Mattingly explains how experiments function Specifically he discusses what it is about experimental practice that transforms observations of what may be very localized particular isolated systems into what may be global general integrated empirical knowledge Mattingly argues that the purpose of experimentation is the same as the purpose of any other knowledge generating enterprise to change the state of information of the knower This trivial seeming point has a non trivial consequence to understand a knowledge generating enterprise we should follow the flow of information Therefore the account of experimental knowledge Mattingly provides is based on

understanding how information flows in experiments what facilitates that flow what hinders it and what characteristics allow it to flow from system to system into the heads of researchers and finally into our store of scientific knowledge
