

Introduction From Physics: A Lab Report on Pendulum

The purpose of this lab is to determine the period of a simple pendulum. The period is the time it takes for the pendulum to complete one full cycle of oscillation.

The hypothesis is that the period of a simple pendulum is proportional to the square root of the length of the string. This hypothesis is based on the theory of simple harmonic motion.

The experiment was conducted by measuring the period of a simple pendulum for different lengths of string. The results are shown in the table below.

The data shows that the period of a simple pendulum is indeed proportional to the square root of the length of the string. This confirms the hypothesis.
