**Handbook of Prescriptive Treatments for Adults**

Robert T. Ammerman, Michel Hersen, 2013-11-11 This book could not have been conceptualized or published 20 years ago. Indeed it is doubtful that we could have organized the material for this handbook 10 years ago. Over the last 20 years however the painstaking efforts of many clinical researchers working with a variety of resistive psychopathologies have resulted in specific psychotherapies and pharmacotherapies that are effective with a significant proportion of patients at least for some of the disorders. Much clinical research remains to be carried out in the forthcoming decades. But now that we are nearing the 21st century at least some statement about efficacy can be made. In 1967 Gordon Paul succinctly stated that the ultimate goal of treatment outcome research is to determine What treatment by whom is most effective for this individual with that specific problem and under which set of circumstances p 111. At that time empirical evaluations of psychosocial and pharmacologic treatments were few and far between. Methodological strategies for determining treatment effectiveness were also in the formative stage as exemplified by introduction of control groups that received inactive interventions i.e. placebo and the relatively recent practice of comparing two or more treatments in addition to placebo. In the almost three decades since Paul's oft quoted dictum both the quantity and the quality of treatment outcome research with adults have increased dramatically. The Laboratory Mouse Hans Hedrich, 2004-08-21 Among animals used in research teaching and testing mice are now widely recognized as the most important model for human diseases and disorders. They comprise the majority of all experimental mammals and tend to be the model of choice used for research into many diseases disorders including cancer heart disease asthma Alzheimer's Down syndrome deafness osteoporosis obesity diabetes and even mental health research. Additionally the laboratory mouse continues to play a widely publicized vital role in the human genome project. One of the most time consuming activities in research laboratories is looking up information specific to the species or strain of animal being used. This book part of the highly successful Handbook of Experimental Animals series allows the user quick access to any point of interest on the mouse as an experimental model. Edited by Hans Hedrich Hannover Medical School Comprehensive reference source written by international experts Well illustrated with high quality detailed images Two color user friendly format combined with color plate sections **Zosen**, 1983 Clinical Handbook of Psychological Disorders, Fourth Edition David H. Barlow, 2007-11-15 With over 75 000 copies sold this clinical guide and widely adopted text presents authoritative guidelines for treating frequently encountered adult disorders. The Handbook is unique in its focus on evidence based practice and its attention to the most pressing question asked by students and practitioners How do I do it. Leading clinical researchers provide essential background knowledge on each problem describe the conceptual and empirical bases of their respective approaches and illustrate the nuts and bolts of evidence based assessment and intervention Traumatic Stress Bessel A. Van der Kolk, Alexander C. McFarlane, Lars Weis?th, 1996-05-03 This book should be of value to all mental health professionals researchers and students interested in traumatic stress as well as legal professionals dealing with PTSD related issues.
