their unit's mission and medical air crew training experience. Medical directors or designated supervising physicians should endorse these guidelines as a baseline, appropriately adjust components as needed, and responsibly manage individual unit medical missions within the scope of practice of their Critical Care Flight Paramedics, Enroute Critical Care Nurses, and advanced practice aeromedical providers. The medication section of this manual is provided for information purposes only. CCFPs may administer medications only as listed in the guidelines unless their medical director and/or supervising physician orders a deviation. Other medications may be added so long as the unit supervising physician and/or medical director approves them. This manual also serves as a reference for physicians providing medical direction and clinical oversight to the CCFP. Treatment direction which is more appropriate to the patient's condition than the guideline should be provided by the physician as long as the CCFP scope of practice is not exceeded. Any medical guideline that is out of date or has been found to cause further harm will be updated or deleted immediately. The Medical Evacuation Concepts and Capabilities Division (MECCD) serves as the managing editor of the SMOG and are responsible for content updates, managing the formal review process, and identifying review committee members for the annual review. **Manual of Austere and Prehospital Ultrasound** Benjamin D. Nicholson, Michael J. Vitto, Harinder S. Dhindsa, 2021-01-27. Ultrasound has rapidly become integral to the practice of emergency medicine. Over the past few years, with improvements in device size and cost, there has been increasing interest in exploring the utility of ultrasound in the prehospital environment. Much of the available literature on ultrasound in the emergency setting focuses on care delivered in emergency departments and intensive care units within the developed world. As a result, most resources are inappropriate and inadequate for doctors and non-physicians practicing in out-of-hospital environments that, by definition, are resource-limited. This manual fills that gap by focusing on simplified discussions of ultrasound studies, ultrasound physics, and research that impacts out-of-hospital care in order to meet the needs of prehospital and austere providers. The manual discusses the use of ultrasound for diagnosis in out-of-hospital care, advanced noninvasive monitoring of patients, and safety in performing procedures common to the prehospital and austere environment. As is the approach for prehospital education, the chapters are complaint-based and not diagnosis-based where applicable. Chapters cover ultrasound image interpretation and basic physics, common image adjustments to improve image quality, unique challenges found in urban prehospital environments, austere/wilderness environments, tactical environments, and military special operations environments, and initial training, quality improvement, assurance programs, and credentialing. It also includes a section on procedures such as pericardiocentesis, vascular access, cricothyroidotomy, and others specific to austere providers. The Manual of Austere and Prehospital Ultrasound is an essential resource for physicians and related professionals, residents, and medical students in
