These findings suggest that the use of a single, standardized, and validated instrument to assess the quality of care may be a useful tool for identifying areas for improvement in the management of patients with chronic conditions. The use of such an instrument may also be useful for monitoring the effectiveness of interventions designed to improve the quality of care.

It's not a life-threatening disease, but it can affect your health if it's not treated properly. The most common cause of the disease is the use of drugs, such as cocaine, but it can also be caused by a virus. The disease is usually diagnosed by a blood test, and the treatment is usually a combination of drugs and therapy.
