

STARTING THE ENGINE

Manual Recoil Starting

CAUTION: Do not attempt to operate the mower without having the mower discharge chute guard in place. See page 5.

1. Fully depress the drive clutch pedal.

2. Move the transmission shift lever to the "N" (neutral) position.

3. Depress the parking brake and engage the parking brake by pulling the parking brake lever rearward (locked) position.

NOTE: The brake pedal will remain depressed when the parking brake lever is in the rearward (locked) position.

4. Pull rearward on the mower clutch lever, moving the lever to the "DISENGAGED" position.

5. Turn the ignition key to the "RUN" (horizontal) position.

6. Move the throttle-choke lever to the "CHOKE" position when starting a cold engine, or to the "FAST" position if the engine is warm. Normally, it is not necessary to use the "CHOKE" position to start a warm engine.

NOTE: The transmission shift lever must be in the "N" neutral position and the mower clutch lever must be in the "DISENGAGED" position before the engine will start.

7. Raise the shroud for access to the recoil starter.

8. Pull the recoil starter rope handle slowly until engine compression is noticed; then, give a fast steady pull.

IMPORTANT: After the engine has started, hold on to the handle and allow the rope to retract slowly. This will prevent damage to the rope as well as the recoil assembly.

Lower the shroud after the engine starts.

Allow the engine to warm up a few minutes before operating the riding mower.

The engine is air-cooled and requires an unrestricted, ample amount of air for cooling the valves, piston, rings, and other internal engine parts. Keep the engine air intake screen clean, page 14. Avoid unnecessary engine idling. Prolonged engine idling can cause the engine operating temperature to rise. This in turn causes crankcase oil dilution, due to incomplete fuel combustion, and permits formation of gummy deposits on valves, piston, and piston rings. It also allows rapid accumulation of engine sludge and unburned fuel in the exhaust system. Rather than idle the engine for a considerable length of time, stop the engine.

TO STOP ENGINE, move throttle lever to the "IDLE" position, turn ignition key to "OFF" (vertical) position and remove it from the switch.
