Totemeier, 2003-12-09 Smithells is the only single volume work which provides data on all key aspects of metallic materials Smithells has been in continuous publication for over 50 years This 8th Edition represents a major revision Four new chapters have been added for this edition these focus on Non conventional and emerging materials metallic foams amorphous metals including bulk metallic glasses structural intermetallic compounds and micro nano scale materials Techniques for the modelling and simulation of metallic materials Supporting technologies for the processing of metals and alloys An Extensive bibliography of selected sources of further metallurgical information including books journals conference series professional societies metallurgical databases and specialist search tools One of the best known and most trusted sources of reference since its first publication more than 50 years ago The only single volume containing all the data needed by researchers and professional metallurgists Fully updated to the latest revisions of international standards

Sheet Metal Forming Processes Dorel Banabic, 2010-06-21 The concept of virtual manufacturing has been developed in order to increase the industrial performances being one of the most efficient ways of reducing the manufacturing times and

improving the quality of the products Numerical simulation of metal forming processes as a component of the virtual manufacturing process has a very important contribution to the reduction of the lead time The finite element method is currently the most widely used numerical procedure for simulating sheet metal forming processes The accuracy of the simulation programs used in industry is influenced by the constitutive models and the forming limit curves models incorporated in their structure From the above discussion we can distinguish a very strong connection between virtual manufacturing as a general concept finite element method as a numerical analysis instrument and constitutive laws as well as forming limit curves as a specificity of the sheet metal forming processes Consequently the material modeling is strategic when models of reality have to be built The book gives a synthetic presentation of the research performed in the field of sheet metal forming simulation during more than 20 years by the members of three international teams the Research Centre on Sheet Metal Forming CERTETA Technical University of Cluj Napoca Romania AutoForm Company from Zurich Switzerland and VOLVO automotive company from Sweden The first chapter presents an overview of different Finite Element FE formulations used for sheet metal forming simulation now and in the past

Advances in Concurrent Engineering R. Goncalves, R. Roy, A. Steiger-Garcia, 2002-01-01 Topics covered include design technologies and applications FE simulation for concurrent design and manufacture methodologies knowledge engineering and management CE within virtual enterprises and CE the future
