electromagnetic radiation and natural objects which in its turn allowed for better modelization and for the creation of refined mathematical tools in the processing of remotely sensed data and in the determination of the physical status of remote objects The community of research workers engaged in development and use of remote sensing methods changed accordingly from a modest group of scientists in the early 1970 s to a considerable branch of specialized and interdisciplinary activity The training of students had to be adapted to cope with the increasing number of people entering this new field and with the increasing quality of the material to be presented
