of 800mg per day can cause serious side effects while treating cancer 3 Recently Lenvatinib has been approved as a first line therapy and Regorafenib as a second line therapy with the hope that there may be further reports reviewing their tolerance in the future 4 HCC targeted drug therapy remains costly 5 Some novel agents including Donafenib Regorafenib Lenvatinib and Carbozantinib have similar Physiological mechanisms and share similar chemical structures unit with sorafenib all these compounds are built based on the skeleton structure of 1 4 pyridin 4 yloxy phenyl urea In this Research Topic we aim to provide an overview of the recent progress around HCC treatment especially HCC ICC related drug therapy and the molecular mechanism of drug resistance not only for TKIs but also for ICIs encompassing relevant basic and translational studies We welcome submission of Original Research Mini Review and Review articles focusing on the sub topics below

Group,Specialist Committee of Cancer Prevention and Control of Chinese Preventive Medicine Association,2021-02-25 The age adjusted incidence of primary liver cancer PLC has been declining in China However PLC cases in China account for 55% globally The disease burden is still high and the five year survival rate has not improved significantly in the past two decades This guideline outlines PLC screening in populations with high risk both in the hospital and community settings Liver cirrhosis and chronic hepatitis B are the main causes of PLC in China For better PLC surveillance and screening in clinical practices it is recommended that these populations be stratified into four risk levels namely low intermediate high and extremely high risk A lifelong surveillance is suggested for those with risks of PLC The intervals and tools for surveillance and screening are recommended based on risk levels Abdominal ultrasonography combined with serum alpha fetoprotein tests routine surveillance is recommended every 6 months for high risk PLC Routine surveillance every 3 months and enhanced CT MRI examinations every 6 12 months is recommended for those with extremely high risk of PLC The surveillance interval can be extended to one year or longer for those with low or intermediate risk because the annual incidence of low risk PLC is relatively low The cost effectiveness of these recommendations remains to be evaluated
