**Research for Educational Change** Jill Adler, Anna Sfard, 2016-06-17 Research for  
Educational Change presents ways in which educational research can fulfil its commitments to educational practice  
Focussing its discussion within the context of mathematics education it argues that while research generated insights can  
have beneficial effects on learning and teaching the question of how these effects are to be generated and sustained is far  
from evident The question of how to turn research into educational improvement is discussed here in the context of learning  
and teaching hindered by poverty and social injustice In the first part of the book four teams of researchers use different  
methodologies while analysing the same corpus of data collected in a South African mathematics classroom In the second  
part each of these teams makes a specific proposal about what can be done and how so that its research generated insights  
have a tangible beneficial impact on what is happening in mathematical classrooms Combining two discourses that of  
researchers speaking to one another and that of researchers communicating their insights to those responsible for  
educational practice the book deals with the perennial question of communication between those who study educational  
processes and those who are directly responsible for teacher education educational research and classroom practices This  
book will be key reading for postgraduates researchers and academics in education and particularly in the areas of  
mathematics education education research teacher education and classroom practice It will also appeal to teacher educators
