TCP/IP protocol suite has become the foundation for the set of technologies that form the basis of the Internet. The convergence of IBM mainframe capabilities with Internet technology connectivity and standards, particularly TCP/IP, is dramatically changing the face of information technology and driving requirements for ever more secure, scalable, and highly available mainframe TCP/IP implementations. The IBM z/OS Communications Server TCP/IP Implementation series provides understandable step-by-step guidance about how to enable the most commonly used and important functions of z/OS Communications Server TCP/IP. This IBM Redbooks publication explains how to set up security for your z/OS networking environment. With the advent of TCP/IP and the Internet, network security requirements have become more stringent and complex. Because many transactions come from unknown users and from untrusted networks such as the Internet, careful attention must be given to host and user authentication, data privacy, data origin authentication, and data integrity. Also, because security technologies are complex and can be confusing, we include helpful tutorial information in the appendixes of this book. For more specific information about z/OS Communications Server base functions, standard applications, and high availability, refer to the other volumes in the series: IBM z/OS V1R11 Communications Server TCP/IP Implementation Volume 1: Base Functions, Connectivity, and Routing (SG24-7798); IBM z/OS V1R11 Communications Server TCP/IP Implementation Volume 2: Standard Applications (SG24-7799); IBM z/OS V1R11 Communications Server TCP/IP Implementation Volume 3: High Availability, Scalability, and Performance (SG24-7800). In addition, z/OS Communications Server IP Configuration Guide (SC31-8775), z/OS Communications Server IP Configuration Reference (SC31-8776), and z/OS Communications Server IP User's Guide and Commands (SC31-8780) contain comprehensive descriptions of the individual parameters for setting up and using the functions that we describe in this book. They also include step-by-step checklists and supporting examples. It is not the intent of this book to duplicate the information in those publications but to complement them with practical implementation scenarios that might be useful in your environment. To determine at what level a specific function was introduced, refer to z/OS Communications Server New Function Summary (GC31-8771).

*XML and Web Technologies for Data Sciences with R*  
Deborah Nolan, Duncan Temple Lang, 2013-11-29

Web technologies are increasingly relevant to scientists working with data for both accessing data and creating rich, dynamic, and interactive displays. The XML and JSON data formats are widely used in Web services, regular Web pages, and JavaScript code, and visualization formats such as SVG and KML for Google Earth and Google Maps. In addition, scientists use HTTP and other network protocols to scrape data from Web pages, access REST and SOAP Web Services, and interact with NoSQL databases and text search applications. This book provides a practical, hands-on introduction to these technologies, including high-level functions the authors have developed for data scientists. It describes strategies and approaches for extracting data from HTML, XML, and JSON formats and how to programmatically access data from the Web. Along with these general skills, the authors illustrate several applications that are relevant to data scientists, such as reading and writing spreadsheet documents both locally and via Google Docs, creating interactive and dynamic

visualizations displaying spatial temporal displays with Google Earth and generating code from descriptions of data structures to read and write data These topics demonstrate the rich possibilities and opportunities to do new things with these modern technologies The book contains many examples and case studies that readers can use directly and adapt to their own work The authors have focused on the integration of these technologies with the R statistical computing environment However the ideas and skills presented here are more general and statisticians who use other computing environments will also find them relevant to their work Deborah Nolan is Professor of Statistics at University of California Berkeley Duncan Temple Lang is Associate Professor of Statistics at University of California Davis and has been a member of both the S and R development teams
