

WRITING SCIENTIFIC RESEARCH PAPERS

I. What is a Research Paper?

There are two kinds of research papers. Primary or experimental research papers describe an experiment performed by the author. (I mean "experiment" in the broadest sense, as in a scientific investigation. The investigation may employ a rigorously controlled lab experiment, a controlled field experiment, a theoretical/mathematical investigation, or simply some new scientific observations. The key is that the body of the paper is about a novel investigation conducted by the author.) Secondary or review research papers summarize the research that has been done in a particular area. Reviews generally do not introduce much new information or new results, but rather synthesize a larger body of work, providing a new perspective on a field or question. In this class, you will be required to write a scientific review paper.

A secondary research paper or review paper is not a 'book report' or an annotated list of experiments in a particular field, but demands a considerable, complete literature review. However, beyond just reporting the results and conclusions of other studies, the review must integrate, interpret and expand these conclusions. Often, articles must be read over and over again to really understand the subtle relevance of a particular result or conclusion. Then, the independent conclusions of separate investigations must be combined into a cohesive presentation. They must be contrasted and compared; are there conflicting conclusions? Can apparent conflicts be resolved through a new outlook or interpretation? Review papers often take historical perspectives, describing how a field (and the major questions in that field) changed as more information was accumulated. Or, review papers may focus on 'the state of the art' in a particular field; interpreting divergent results and suggesting an appropriate avenue for future research.

Who writes review articles? Usually, it is the experts in a particular field. They have the experience and knowledge to critically evaluate experiments and organize them in a new provocative way; perhaps incorporating them into a new, unifying theory. Good review papers are not easy to write; if they were, more scientists would write them. By writing your review paper, I expect you to become a 'departmental expert' on a topic, able to 'wow' your fellow AP biology students with your new knowledge about your field. I do expect to see a creative synthesis of the literature, rather than a jumbled regurgitation of facts.

BookEnds Writing for publication is essential for disseminating nursing knowledge and this book will surely prepare budding authors and serve as a resource for experienced authors It is a great reference for authors at all levels Score 100 Doody s

The ability to communicate in writing is an essential skill particularly for nurses at the graduate level. This is a best selling comprehensive and widely used resource on writing for nurse clinicians, faculty researchers and graduate students. It covers all kinds of writing that beginning and experienced nurse authors may be required or choose to undertake: journal articles, book chapters and preparing manuscripts from course work. Brimming with helpful examples, the book takes the reader step by step through the entire process of writing from the generation of an idea through searching the nursing literature, preparing an outline, writing and revising a draft and submitting the finished product for publication. In addition to being extensively updated, the third edition features new chapters on writing articles reporting quality improvement studies and on open access publications. New writing samples have been added that illustrate how to present multiple types of research and writing for various types of journals and other venues. The book describes how to select an appropriate journal and gear the writing for the intended audience, submit a manuscript and respond to reviewers. It provides strategies for searching bibliographic databases, analyzing and synthesizing the literature and writing a literature review. Information is included on developing manuscripts from theses and dissertations, writing a paper with multiple authors and when and how to include tables or figures. Ethical considerations are also addressed. **FEATURED IN THE THIRD EDITION:** Selecting the right journal for publication using web resources and more; Selecting and searching bibliographic databases for synthesizing literature; Developing literature reviews for target audiences of research versus clinical papers; Disseminating research to researchers versus clinicians; Writing quality improvement reports and evidence based practice articles; Writing papers for clinical journals; Publishing innovations in clinical practice and unit based initiatives; Publishing in open access journals and important considerations; Turning capstone projects, theses and dissertations into manuscripts; Working with coauthors and student/faculty collaborations; Responding to peer reviews; Avoiding abuses of authorship and copyright issues. Effective Scientific Communication Cristina Hanganu-Bresch, Kelleen Flaherty, 2020. Selfish scientists won't share new findings ran one headline in The Onion. The story was about a group of rebellious scientists who made a groundbreaking life saving discovery but decided to hold on to it unless they were paid a ludicrous reward. Imagine that for a second science happening but without anyone finding out about it. *The Psychology Major's Handbook* Tara L. Kuther, 2019-03-05.
