**The Handbook of Emergent Technologies in Social Research** Sharlene Nagy Hesse-Biber, 2011-03-03 New technologies are breaking the boundaries of how social researchers practice their craft and it has become clear these changes are dramatically altering research design from the way data is collected to what is considered data Bringing together all the emerging social science research technologies in one place The Handbook of Emergent Technologies in Social Research offers comprehensive and up to date thinking on emerging technologies and addresses their impact on research methods and in turn how new technologies lead to new research questions and areas of inquiry The Handbook is organized into five sections covering internet technologies emergent data collection methods audio visual mobile and geospatial technologies and technology s impact on studying social life in natural settings all after taking a look at emergent technologies from a broad social research context Many of the twenty nine chapters provide a commentary on and summary of specific technologies like global surveys on the internet mobile phones data mining and remote sensing with a central focus on the most effective ways to use them Others discuss the ethical and moral implications especially issues of privacy and confidentiality and collaborations across disciplines and outside the academy The Handbook of Emergent Technologies in Social Research is indispensable for any social researcher looking to incorporate emerging technologies into their methods and practice *Flying Magazine* , 2004-12 Autonomic and Trusted Computing Bing Xie, Juergen Branke, Masoud Sadjadi, Daqing Zhang, Xingshe Zhou, 2010-10-08 Computing systems including hardware software communication and

networks are becoming increasingly large and heterogeneous. In short, they have become increasingly complex. Such complexity is getting even more critical with the ubiquitous permeation of embedded devices and other pervasive systems. To cope with the growing and ubiquitous complexity, autonomic computing (AC) focuses on self-manageable computing and communication systems that exhibit self-awareness, self-configuration, self-optimization, self-healing, self-protection, and other self-properties to the maximum extent possible without human intervention or guidance. Organic computing (OC) additionally addresses adaptability, robustness, and controlled emergence, as well as nature-inspired concepts for self-organization. Any autonomic or organic system must be trustworthy to avoid the risk of losing control and retain confidence that the system will not fail. Trust and/or distrust relationships in the Internet and in pervasive infrastructures are key factors to enable dynamic interaction and cooperation of various users, systems, and services. Trusted, trustworthy computing (TC) aims at making computing and communication systems, as well as services, available, predictable, traceable, controllable, assessable, sustainable, dependable, persistent, secure, privacy-protectable, etc. A series of grand challenges exists to achieve practical autonomic or organic systems with truly trustworthy services. Started in 2005, ATC conferences have been held at Nagasaki, Japan; Vienna, Austria; Three Gorges, China; Hong Kong, China; Oslo, Norway; and Brisbane, Australia. The 2010 proceedings contain the papers presented at the 7th International Conference on Autonomic and Trusted Computing (ATC 2010) held in Xi'an, China, October 26-29, 2010.

**Mobile Computing, Applications, and Services** Petros Zerfos, Rebecca Montanari, Thomas Phan, 2010-05-11. This proceedings volume includes the full research papers presented at the First International Conference on Mobile Computing, Applications, and Services (MobiCASE) held in San Diego, California, during October 26-29, 2009. It was sponsored by ICST and held in conjunction with the First Workshop on Innovative Mobile User Interactivity (WIMUI). MobiCASE highlights state-of-the-art academic and industry research work in main topics above the OSI transport layer with an emphasis on complete end-to-end systems and their components. Its vision is largely influenced by what we see in the consumer space today: high-end mobile phones, high-bandwidth wireless networks, novel consumer and enterprise mobile applications, scalable software infrastructures, and of course, an increasingly larger user base that is moving towards an almost a mobile lifestyle. This year's program spanned a wide range of research that explored new features, algorithms, and infrastructure related to mobile platforms. We received submissions from many countries around the world, with a high number from Europe and Asia, in addition to the many from North America. Each paper received at least three independent reviews from our Technical Program Committee members during the Spring of 2009, with final results coming out in July. As a result of the review process, we selected 15 high-quality papers and complemented them with six invited submissions from leading researchers, reaching the final count of 21 papers in the program.
