Human Circulation Sheet Sheet:

Image-Based Computational Modeling of the Human Circulatory and Pulmonary Systems Krishnan B.

Chandran, H. S. Udaykumar, Joseph M. Reinhardt, 2010-11-18 Image Based Computational Modeling of the Human Circulatory and Pulmonary Systems provides an overview of the current modeling methods and applications enhancing interventional treatments and computer aided surgery. A detailed description of the techniques behind image acquisition processing and three dimensional reconstruction are included. Techniques for the computational simulation of solid and fluid mechanics and structure interaction are also discussed in addition to various cardiovascular and pulmonary applications. Engineers and researchers involved with image processing and computational modeling of human organ systems will find this a valuable reference.

Mathematical Modelling of the Human Cardiovascular System Alfio Quarteroni, Luca Dede', Andrea Manzoni, Christian Vergara, 2019-05-09 Mathematical and numerical modelling of the human cardiovascular system has attracted remarkable research interest due to its intrinsic mathematical difficulty and the increasing impact of cardiovascular diseases worldwide. This book addresses the two principal components of the cardiovascular system: arterial circulation and heart function. It systematically describes all aspects of the problem, stating the basic physical principles, analysing the associated mathematical models that comprise PDE and ODE systems, reviewing sound and efficient numerical methods for their approximation and simulating both benchmark problems and clinically inspired problems. Mathematical modelling itself imposes tremendous challenges due to the amazing complexity of the cardiovascular system and the need for computational methods that are stable, reliable and efficient. The final part is devoted to control and inverse problems including parameter estimation, uncertainty quantification and the development of reduced order models that are important when solving problems with high complexity which would otherwise be out of reach.
