Fine,2012-12-06 During the past decade there has been a renaissance of interest in the use of peritoneal dialysis as a primary dialytic modality for the treatment of children with end stage renal disease ESRD The development of the technique of continuous ambulatory peritoneal dialysis CAPD and continuous cycling peritoneal dialysis CCPD has markedly changed the approach to children requiring dialytic therapy The availability of these techniques has facilitated prolonged dialysis in infants and has for the first time given pediatric nephrologists in many areas of the world an opportunity to consider dialysis in children afflicted with ESRD I have enlisted the collaboration of colleagues from Europe South America Canada and the United States in compiling this multidisciplinary text which hopefully contains the most up to date comprehensive information regarding the use of CAPD CCPD in children It is my hope that every nephrologist pediatric and adult nephrology nurse pediatric and adult nephrology technician or allied health professional dealing with children who require these therapeutic modalities will be
