Fist,2012-12-06 This is not a dictionary and nor is it an encyclopedia It is a reference and compendium of useful information about the converging worlds of computers communications telecommunications and broadcasting You could refer to it as a guide for the Information Super Highway but this would be pretentious It aims to cover most of the more important terms and concepts in the developing discipline of Informatics which in my definition includes the major converging technologies and the associated social and cultural issues Unlike a dictionary this handbook makes no attempt to be prescriptive in its definitions Many of the words we use today in computing and communications only vaguely reflect their originations And with such rapid change older terms are often taken twisted inverted and mangled to the point where any attempt by me to lay down laws of meaning would be meaningless The information here is descriptive I am concerned with usage only This book therefore contains keywords and explanations which have been culled from the current literature from technical magazines newspapers the Internet forums etc This is the living language as it is being used today not a historical artifact of 1950s computer science
