Nanostructured Solar Cells Narottam Das,2017-02-22 Nanostructured solar cells are very important in renewable energy sector as well as in environmental aspects because it is environment friendly The nano grating structures such as triangular or conical shaped have a gradual change in refractive index which acts as a multilayer antireflective coating that is leading to reduced light reflection losses over broadband ranges of wavelength and angle of incidence There are different types of losses in solar cells that always reduce the conversion efficiency but the light reflection loss is the most important factor that decreases the conversion efficiency of solar cells significantly The antireflective coating is an optical coating which is applied to the surface of lenses or any optical devices to reduce the light reflection losses This coating assists for the light trapping capturing capacity or improves the efficiency of optical devices such as lenses or solar cells Hence the multilayer antireflective coatings can reduce the light reflection losses and increases the conversion efficiency of nanostructured solar cells

Mitchener,2021-07-28 On November 20 1943 the U S military invaded the Tarawa Atoll of the Gilbert Islands as part of the first American offensive in the Central Pacific region during World War II This invasion marked more than one first as it was also the introductory test of a doctrine

developed during the interwar years to address problems inherent in situations in which amphibious assaults required support by naval gunfire rather than land based artillery In this detailed study Donald K Mitchener documents and analyzes the prewar development of this doctrine as well as its application and evolution between the years 1943 1945 The historical consensus is that the test at Tawara was successful and increased the efficiency with which U S forces were able to apply the doctrine in the Pacific theater for the remainder of the Second World War Mitchener challenges this view arguing that the reality was much more complex He reveals that strategic concerns often took precedence over the lessons learned in the initial engagement and that naval planners failure to stay up to date with the latest doctrinal developments and applications sometimes led them to ignore these lessons altogether U S Naval Gunfire Support in the Pacific War presents an important analysis that highlights the human cost of misinterpreting strategic and tactical realities **Phi Delta Kappan** ,1926
