Above is a portion of the output table reporting the ANOVA tests on the three dependent variables, abortions per 1000, divorces per 1000, and % Christian adherents. Note that only the  $F$  values for %Christian adherents and Divorces per 1000 population are significant at your criterion of .017. (Note: the MANOVA procedure doesn't seem to let you set different  $p$  levels for the overall test and the univariate tests, so the power here is higher than it would be if you did these tests separately in a ANOVA procedure and set  $p$  to .017 before you did the tests.)
