

Scientific Report

Title:

The title should simply introduce what your experiment is about

Example: The role of light in Photosynthesis

Introduction:

- Write a paragraph that gives your readers background information to understand your experiment.
- This includes explaining scientific theories, processes and other related knowledge.

Example:

Photosynthesis is a vital process for life. It occurs when plants intake carbon dioxide, water and light, and results in the production of glucose and water. The light required for photosynthesis is absorbed by chlorophyll, the green pigment of plants, which is contained in the chloroplasts.

The glucose produced through photosynthesis is stored as starch, which is used as an energy source for the plant and its consumers.

The presence of starch in the leaves of a plant indicates that photosynthesis has occurred.

Aim:

- The aim identifies what is going to be tested in the experiment.
- This should be short, concise and clear

Example:

The aim of the experiment is to test whether light is required for photosynthesis to occur.

Hypothesis

- The hypothesis is a prediction of the outcome of the experiment.
- You have to use background information to make an educated prediction.

Example:

It is predicted that photosynthesis will only occur in leaves that are exposed to light and not in leaves that are not exposed to light. This will be indicated by the presence of absence of starch in the leaves

Risk Assessment:

- Identify the hazards associated with the experiment and provide a method to prevent or minimise the risks

Example:

Risk	Assessment
Scissors are sharp and can cause injury	Use scissors correctly Wear closed durable shoes to prevent injury from falling sharp objects
Methylated spirits are highly flammable and can cause burns or fires	Before using methylated spirits, ensure that all ignition sources such as bunsen burners and matches are extinguished.

Computational Thinking and Coding for Every Student Jane Krauss, Kiki Protsman, 2016-10-28 Empower tomorrow's tech innovators. Our students are avid users and consumers of technology. Isn't it time that they see themselves as the next technological innovators too? Computational Thinking and Coding for Every Student is the beginner's guide for K-12 educators who want to learn to integrate the basics of computer science into their curriculum. Readers will find practical strategies for teaching computational thinking and the beginning steps to introduce coding at any grade level across disciplines and during out-of-school time. Instruction-ready lessons and activities for every grade. Specific guidance for designing a learning pathway for elementary, middle, or high school students. Justification for making coding and computer science accessible to all. A glossary with definitions of key computer science terms. A discussion guide with tips for making the most of the book and companion website with videos, activities, and other resources. Momentum for computer science education is growing as educators and parents realize how fundamental computing has become for the jobs of the future. This book is for educators who see all of their students as creative thinkers and active contributors to tomorrow's innovations. Kiki Protsman and Jane Krauss have been at the forefront of the rising popularity of computer science and are experts in the issues that the field faces such as equity and diversity. In this book, they've condensed years of research and practitioner experience into an easy-to-read narrative about what computer science is, why it is important, and how to teach it to a variety of audiences. Their ideas aren't just good; they are research-based and have been in practice in thousands of classrooms. So to the hundreds and thousands of teachers who are considering learning or actively teaching computer science, this book is well worth your time.
