

Safe Manual Handling

Overview

Over a risk of accidents arises from manual handling activities and, if these, staff should be told:

THE MANUAL HANDLING OPERATIONS REGULATIONS 1992

These regulations are intended to reduce the risk of injury to employees when carrying out manual handling, which is defined as physical activity that involves lifting, lowering, pushing and pulling.

Typical manual handling injuries include:

- Damage to ligaments and tendons
- Sprains or strains
- Bruised skin
- Fractures

The human body:

The back is composed of a series of short, cylindrical bones separated by cushioning discs. Tendons and muscles support the spine, and your requirement is a warning that this is not a casual task.

Risk Assessment

This is the process of identifying significant risks and assessing them. They arise in those areas a range of control measures to be devised and applied, which will manage risk down to an acceptable level. Such an assessment must be carried out by a competent individual familiar with the legal requirements and the tasks undertaken. Where there are 5 or more employees, assessments must be written down.

The assessment should consider risks to the '5 Ds' format:

Load

- Is the load mechanical and/or electrical?
- Is the container or packaging environment for workers?
- Can the container or packaging be used to help where loads must be lifted?
- Will there be potential problems with the need to hold loads away from the body?

Individual

- Does the worker have any health issues?
- Are pregnant workers involved in lifting?
- Does the load require unusual handling?

Load

- Are it heavy, awkward or handle of force used?
- What is the weight?
- What load is used?

Environment

- Are there issues with temperature, too high or low?
- Are there irregularities in the floor?
- Is there enough light?
- Is the weather good or problem, such as high winds?

Employer & Employee Duties

Employers:

- Must assess the level of risk faced by their employees
- Must implement a safe system of work based on the assessment
- Must assess manual handling where reasonably practicable as a condition of the employment
- Must reduce any residual risk as far as is practicable
- Must provide relevant information and training
- Must review assessments and work systems

Employees:

- Must adhere to the safe system of work
- Must use the equipment and systems provided
- Must understand warning/forfeiting the employee
- Must report any problems to they with the company procedures

Prevention of injury:

- In order to safeguard yourself you should:
- Lift the weight within your ability and in line with the guidelines given in training
- Maintain good posture at all times
- Always be warm-up before strenuous work
- If you feel pain, stop work immediately and seek medical aid
- Report any incident which gives rise to pain

Good Handling Technique

Planning

- Can I handle the load?
- Are any lifting aids available?
- Do I need help?
- What obstacles are in my way?
- Do I have any personal protective equipment that is safety critical?

Posture

- Keep feet apart with one foot leading the other
- Keep the spine straight and shoulders level
- Bend from the knees - do not lean over the load

Grip

- Ensure a secure grip on the object being moved
- Wear good footwear
- Use any footholds provided

The lift

- Keep the chest forward
- Use your 'trunk' - lift progressively
- Use the legs to lift, not the back
- Keep the load tight against the body with any hands and wrists open
- Do not lift the load out by reaching
- If necessary, use the feet down to adjust your grip
