Selected Water Resources Abstracts ,1976

Food, Energy, and Water Nexus Chittaranjan Ray,Sekhar Muddu,Sudhirendar Sharma,2022-01-17 In this book major issues surrounding importance of water and energy for food security in the United States and India are described representing two extremes in yield irrigation efficiency and automation The farming systems in these two countries face different risks in terms of climatic shifts and systems resiliency to handle the shocks One may have comparative advantage over the other but both are susceptible Innovations in irrigation for food and fuel production improvements in nitrogen and water use efficiency and rural sociological issues are discussed here We also look into some of the unintended consequences of high productivity agriculture in terms of surface and ground water quality and impacts on ecosystem services Finally we present ways to move forward to meet the food demands in the next half century in both countries As the current world population of 7 billion is expected to reach or exceed 10 billion in the next 40 years there will be significant additional demand for food A rising middle class and its preference for a meat based diet also increases the demand for animal feed This additional food and feed production needs special considerations in water and energy management besides the development of appropriate crop hybrids to withstand future climatic shifts and other environmental factors A resilient agricultural landscapes will also be needed to withstand climatic fluctuations disease pressures etc While the upper and many middle income countries have made significant improvements in crop yield due to pressurized irrigation and automation in farming systems the lower income countries are struggling with yield enhancements due to such limitations The rise in population is expected to be more in Sub Sharan Africa and Middle East Low to middle income countries where the crop yields are expected to be low
